

CORRIGENDUM

Prevention of gravidic endothelial hypertension by aspirin treatment administered from the 8th week of gestation

Abdelouahab Bakhti and Daniel Vaiman

Hypertension Research (2012) 35, 244; doi:10.1038/hr.2011.214

Correction to: *Hypertension Research* 34, 1116–1120; doi:10.1038/hr.2011.111

The original version of this article unfortunately contained a mistake. The legend of Figure 1 reported the number of cases of gestational hypertension (9 vs. 1 in the non-treated and treated groups,

respectively) and the number of cases of preeclampsia (4 vs. 0), while we should have read the number of cases of severe preeclampsia and the number of cases of eclampsia (see Figure 1). The number of cases of gestational hypertension (with or without proteinuria) was 31 and 4 in the non-treated and treated groups, respectively.

The actual figure should be the following:

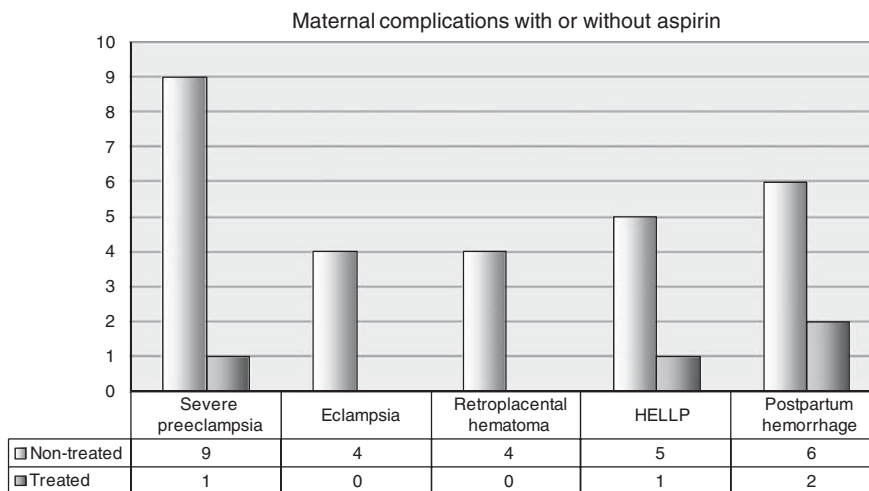

Figure 1
