CORRIGENDUM

Promise and limitations of functional neuroimaging in the study of obesity: is it time for a consortium and a multicenter trial?

A Del Parigi

International Journal of Obesity (2009) 33, 1074; doi:10.1038/ijo.2009.151

Correction to: *International Journal of Obesity* 33: 607–610; doi:10.1038/ijo.2009.55

The above paper contained two mistakes generated during the proof correction.

- The note on the first page is not complete. It should read: Some of the concepts discussed in this editorial were presented by the author at the workshop 'Neuroimaging in Obesity Research' sponsored by the Obesity Taskforce of the

National Institutes of Health in Bethesda (MD, USA) on 27–28 October 2008

- On page 609 the words 'scale – the indi' have been added by mistake. The sentence should read: ...the physiological meaning of local changes of activity at a scale (the individual nuclei) that is, arguably, still out of reach of the FN technology.

The typesetters and the author would like to apologise for the errors.
