

Live Q&A: The hunt for the Higgs

Your chance to chat with researchers about the latest Higgs findings.

13 December 2011

Researchers working on the Large Hadron Collider (LHC) at CERN, Europe's particle-physics laboratory near Geneva, Switzerland, have caught a glimpse of what could be the elusive Higgs boson — although they have not definitively discovered it yet.

Join us for a live web chat with Bill Murray, senior Higgs researcher at the LHC's ATLAS collaboration, and Gordon Kane, a professor of physics at the University of Michigan in Ann Arbor, on **Wednesday 14 December** at **4 p.m. GMT** to ask any questions you might have about the search for the Higgs and what the latest results mean.
