Nature 437, 369–375 (2005)

Mislabelling of a histological section caused the wrong micrograph of a wild-type control to be inserted in Fig. 5b (bottom panel, middle column) of this Article: as published, this is identical to the control bone picture shown in Fig. 3c (top left panel). The panel that should have been shown in Fig. 5b (see below) is from the *Rag2*-mutant mouse; the figure legend remains the same. The mix-up with the control figure does not affect the validity of the data or our original conclusions.
