Erratum: Stereospecific binding of a disordered peptide segment mediates BK channel inactivation

Vivian Gonzalez-Perez, Xu-Hui Zeng, Katie Henzler-Wildman & Christopher J. Lingle

Nature **485**, 133–136 (2012); doi:10.1038/nature10994.

In this Letter, Fig. 2h displays minimal models for recovery from inactivation to guide thinking about the associated single-channel behaviours for control (top trace), in the presence of L-peptide (next two traces), and in the presence of D-peptide (bottom two traces). The model for recovery from inactivation by the L-peptide inadvertently read $I^* \rightleftharpoons O^* \rightarrow C \rightarrow C$ instead of $I^* \rightleftharpoons O^* \rightarrow O \rightarrow C$. This error has no effect on any of our analyses or conclusions. Figure 2h has been corrected in the PDF and HTML versions of this Letter.
