In our Reply to the Brief Communications Arising ‘Is BID required for NOD signalling?’ we made use of a figure generated by the authors of the Comment (*Nature* **488**, E4–E6 (2012); doi:10.1038/nature11366) as part of the review process, in the bottom panel of our Fig. 1a. We introduced two errors (by inadvertently removing five data points, two from the wild type and three from *Ripk2*^{−/−}) into this figure when we were asked to provide a higher-resolution version at the production stage. The corrected panel is shown below as Fig. 1, representing serum MCP-1 levels measured 4 h after MDP injection by multiplex, from wild type (*n* = 10), *Bid*^{−/−} (*n* = 9) and *Ripk2*^{−/−} (*n* = 7) mice.
