

Recent patent applications in antiviral vaccines

Patent #	Subject	Assignee(s)	Inventor(s)	Priority date	application date	Publication date
WO 200589792	A new recombinant protein comprising polypeptides bearing epitopes of human papilloma virus (HPV) antigens; useful for treating or preventing HPV infection, or for immunotherapy against the onset of malignant transformation due to HPV infection.	BT Pharma (Labège-Innopole, France); INSERM (France); Institut Pasteur (Paris); CNRS (France)	Ia Dant D, le Clerc C, Preville X, Timmerman B	3/18/2004		9/29/2005
WO 200587813	A new composition that comprises contacting an antigen-presenting cell with a chimeric antigen comprising an immune response domain and a target binding domain, which comprises a xenotypic antibody fragment; useful for eliciting a T-cell response against hepatitis B virus and hepatitis C virus infections.	ViRexx (Edmonton, Alberta, Canada)	George R, Noujaim A, Tyrrell L, Wang D	2/24/2004		9/22/2005
WO 200587799	A new isolated polypeptide that binds specifically to an oligosaccharide; useful in preparing a vaccine for treating or preventing HIV infection.	US Dept. of Health & Human Services (Washington, DC, USA)	Bewley CA	3/9/2004		9/22/2005
US 20050202045	A method for making a recombinant avian herpesvirus, comprising cotransfected overlapping subgenomic fragments employing the subgenomic clones and enzymes; useful in producing therapeutic or prophylactic vaccines.	Schering-Plough Veterinary Corp. (Kenilworth, NJ, USA)	Cochran MD, Cook SM, Wild MA	6/14/2001		9/15/2005
WO 200585445	A novel recombinant varicella herpes-zoster virus comprising a bacterial artificial chromosome vector sequence; useful as a vaccine for treating varicella herpes-zoster virus infection.	Osaka University (Osaka, Japan)	Gomi Y, Mori Y, Nagaike K, Takahashi M, Yamaishi K	3/5/2004		9/15/2005
EP 1574517	A novel recombinant or synthetic hepatitis C virus E1 envelope protein or its portion comprising one or more disulfide bonds between a specific pair of cysteines; useful as vaccine for hepatitis C virus.	Innogenetics (Ghent, Belgium)	Bosman A, Depla E, Depraetere S, Verheyden G	3/9/2004		9/14/2005
WO 200581716	A novel nucleic acid encoding chimeric polypeptides such as calreticulin and antigenic peptide from severe acute respiratory syndrome (SARS) coronavirus; useful as a DNA vaccine for SARS coronavirus.	Johns Hopkins University (Baltimore, MD, USA)	Hung C, Kim TW, Wu T	11/24/2003		9/9/2005
CN 1616654	A method for inactivating and purifying SARS virus; useful for preparing vaccines to combat SARS.	Kexing Biological Products (Shenzhen, China)	Han Z, Zhang J, Zhang Z	11/12/2003		5/18/2005
CN 1616491	A new fusion protein useful as a vaccine for treating and preventing influenza.	Qinghua University (Beijing)	Chen Y; Liu W	9/29/2004		5/18/2005
CN 1614011	A totally enclosed double-circulating column chromatography process for purifying inactivated virus vaccines.	Jiahe Biotechnology (Guangzhou, China)	He C; Le W	11/6/2003		5/11/2005
CN 1613503	A technique for preparing a virus vaccine using a bioreactor featuring a disk carrier for increasing the surface area used to grow cells, and a better culture condition created for increasing the culture density.	Jiahe Biotechnology (Guangzhou, China)	He C, Zhang J	11/6/2003		5/11/2005
IN 200200194	Liposomes containing novel peptide antigens; useful for regulating the immune response and for the development of therapeutic agents for the prevention and treatment of hepatitis B virus-associated diseases.	Mogam Biotechnology Research Institute (Yongin, South Korea)	Chang JS, Cheong H, Cho SY, Choi MJ, Hwang Y, Kim TY, Lee KU	4/3/2002		3/11/2005
