A human neurosphere attaching to a coated surface

Riccardo Cassiani Ingoni, National Institute of Neurological Disorders and Stroke (NINDS),
National Institutes of Health, USA, cassianr@ninds.nih.gov

Immunostaining of fixed cells using primary antibodies against a marker of immature neurons (red) and a marker of astrocytic cells (green). Nuclei were stained with the DNA dye DAPI (blue). The image was obtained using an inverted fluorescence microscope (Axiovert200M, Zeiss). Scale bar represents 100 μm .

The winner would like to acknowledge the help of Roland Martin (martinr@ninds.nih.gov) and Paolo Muraro (murarop@ninds.nih.gov) (both at the NINDS, USA).
