

Neural progenitor cells expressing tyrosine hydroxylase

Yu-Tzu Tai, University of Cambridge, UK, ytt21@cam.ac.uk

An immunofluorescence microscopy image of neural progenitor cells expressing tyrosine hydroxylase. Cells were stained for β -tubulin (green), tyrosine hydroxylase (red) and green fibrillary acidic protein (GFAP; blue). The image was acquired using a Leitz DMRD microscope. Scale bar represents 40 μ m.
