The following statement refers to the book review published in the March 2007 issue.

“In my review of the book by Hiten Madhani, I interpreted statements made by Mark Ptashne in the Foreword to the book as supportive of Madhani’s approach of presenting conclusions derived from research conducted in yeast without discussing the actual experiments and how they were conducted. However, Ptashne points out that he did not make comments to this effect in his Foreword.” Jeremy Thorner
