Missing sequence information for the RNAi probes used in the letter by Wang *et al.* (Nature Cell Biol. 9, 470-478; 2007) is shown below:

ER α validated Stealth RNAi targeted the sequences GCTACTGTGCAGTGTG CAATGACTA and GCTTAATTCTGGAGTGTACACATTT and Stealth RNAi negative controls contained a comparable amount of GC, low GC and medium GC, respectively (#12935-200 and #12935-300, Invitrogen).
