Patchwork organization of the yeast plasma membrane into numerous coexisting domains

Felix Spira, Nikola S. Mueller, Gisela Beck, Philipp von Olshausen, Joachim Beig & Roland Wedlich-Söldner

Nat. Cell Biol. **14**, 640–648 (2012); published online 29 April 2012

In the version of this article initially published, the figure legends lacked an acknowledgement that the cell shown in Fig. 7b is identical to that in Fig. 8a (top right). The colocalization experiments were performed with controlled acquisition protocol, temperature, culture density and genetic backgrounds. The experimental conditions for Fig. 7b were therefore identical to those for Fig. 8a (top right). The same cell is shown in both panels as a point of comparison to illustrate the degree of protein colocalization.
