Nature Cell Biology **18**, 993–1005 (2016); published online 15 August 2016; retracted online 21 November 2016

In this Article, we reported that G9a promotes colorectal-cancer-initiating cell self-renewal and function by repressing Let-7b expression in a manner independent of its enzymatic activity, thereby activating K-RAS and β -catenin signalling. However, it has come to our attention that during figure assembly certain images were inappropriately processed and duplicated in several figures of the article, including Figs 1d, 2d, 3b, 5a, 5f, 6h and 8f. In light of these errors and image reuse in multiple figures we have no confidence in the accuracy of the reported data, and the conclusions of the paper may be affected. Therefore, we wish to retract the paper. We deeply regret these circumstances and apologize to the scientific community.

Corrigendum: Translocon component Sec62 acts in endoplasmic reticulum turnover during stress recovery

Nature Cell Biology **18**, 1173–1184 (2016); published online 17 October 2016; corrected after print 18 November 2016.

In the version of this Article originally published, the name of co-author Eduardo Cebollero Presmanes was coded wrongly resulting in it being incorrect when exported to citation databases. This has been corrected and the co-author's name now appears as 'Eduardo Cebollero' in the online versions of the Article.
