

# Corrigendum: The NCA sodium leak channel is required for persistent motor circuit activity that sustains locomotion

Shangbang Gao, Lin Xie, Taizo Kawano, Michelle D. Po, Jennifer K. Pirri, Sihui Guan,  
Mark J. Alkema & Mei Zhen

*Nature Communications* 6:6323 doi: 10.1038/ncomms7323 (2015); Published online 26 Feb 2015; Updated 21 May 2015

The authors inadvertently omitted Jennifer K. Pirri and Mark J. Alkema, who developed a promoter construct presented in this Article, from the author list, Acknowledgments, Author contributions statement and Methods section. In addition, in Fig. 3b, the *y* axis was incorrectly labelled as Charge frequency (pC/s) instead of AP frequency (Hz). In Fig. 4c the asterisks for significance were omitted from the third panel in the right. Finally, in Fig. 4e, *Prgef-1* was incorrectly named promoter. All these errors have now been corrected in both the PDF and HTML versions of the Article.
