Drug Insight: I_f inhibitors as specific heart-rate-reducing agents

Jeffrey S Borer

Nature Clinical Practice Cardiovascular Medicine (2004) 1: 103–109 [doi:10.1038/ncpcardio0052]

doi:10.1038/ncpcardio0515

ERRATUM

In the December 2004 issue, the key to Figure 3 was published incorrectly. The correct figure is reproduced below with its full legend.

Figure 3 Changes in heart rate in the different treatment groups during double-blind dose-ranging. (A) At rest. (B) At peak exercise. ^a $P < 0.05$ vs placebo in pairwise comparison. Error bars, standard error of the mean; bid, twice daily. Reprinted from Borer JS *et al.*, for the European Ivabradine Investigators (2003) Anti-anginal and anti-ischemic effects of ivabradine, an I_f inhibitor, in stable angina: a randomized, double-blinded, multicentered, placebo-controlled trial. *Circulation* 107: 817–823, with permission.
