

# Advances in the diagnosis and management of hyperinsulinemic hypoglycemia

Ritika R Kapoor, Chela James and Khalid Hussain\*

*Nature Clinical Practice Endocrinology & Metabolism* (2009) **5:** 101–112 [doi:10.1038/ncpendmet1046]

doi:10.1038/ncpendmet1096

**ERRATUM**

In the February 2009 print issue, due to a technical error, all incidences of the letter l in small capitals

in this article incorrectly appeared as the letter k. This erratum applies to the print issue only; the full text version and the PDF online are correct.

# Early insulin therapy does not improve survival in babies with very low birth weight

*Nature Clinical Practice Endocrinology & Metabolism* (2009) **5:** 64 [doi:10.1038/ncpendmet1028]

doi:10.1038/ncpendmet1104

**ERRATUM**

In the February 2009 issue, the final sentence of this Research Highlight should have read “The authors conclude that elective use of early insulin

therapy in newborn babies who weigh  $<1.5\text{ kg}$  does not improve survival, and is associated with an increased risk of hypoglycemia in those  $>1\text{ kg}$  in weight.”
