

# **The Functional Autism Connectome**

Daniel J. Kelley

University of Wisconsin School of Medicine and Public Health

Neuroscience Training Program Defense Overview

## Autism

Autism is a neurodevelopmental disorder of unknown etiology.

DSM-IV-TR Pervasive developmental disorders (PDDs)

- Childhood disintegrative disorder

- Rett' s disorder

- Autistic disorder

- Asperger' s disorder

- Pervasive developmental disorder-not otherwise specified (PDD-NOS)

## Autism

Autism is a neurodevelopmental disorder of unknown etiology.

DSM-IV-TR Pervasive developmental disorders (PDDs)

Childhood disintegrative disorder

Rett's disorder

Autistic disorder

Asperger's disorder

Pervasive developmental disorder-not otherwise specified (PDD-NOS)

Autism Spectrum Disorders

# Autism

Autism is a neurodevelopmental disorder of unknown etiology.

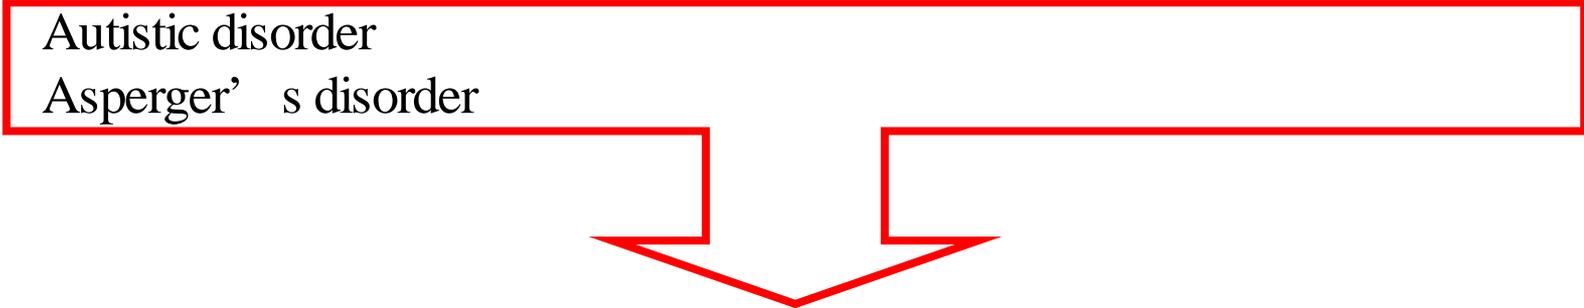

DSM-IV-TR Pervasive developmental disorders (PDDs)

Childhood disintegrative disorder

Rett's disorder

Autistic disorder

Asperger's disorder

Autism

## Epidemiology

PDD: 1966 measure of 4/10,000 ; 2005 increase to 30-60/10,000 (Rutter, 2005)

ASDs:	27.5/10,000	
PDD-NOS:	15/10,000	
Autistic disorder:	10/10,000;	male/female ratio of 4.3:1
Asperger' s disorder:	2.5/10,000	(Fombonne, 2003)

## ASDs versus Cancer Prevalence

Childhood ASDs (CDC, 2007)  
66.6/10,000 or 1/150

Childhood Cancer (NCI, 2005)  
1.5/10,000

### Autism Prevalence in US Public Schools

Wisconsin ranks tenth

2006-2007 Prevalence: 1/140 K-12 students

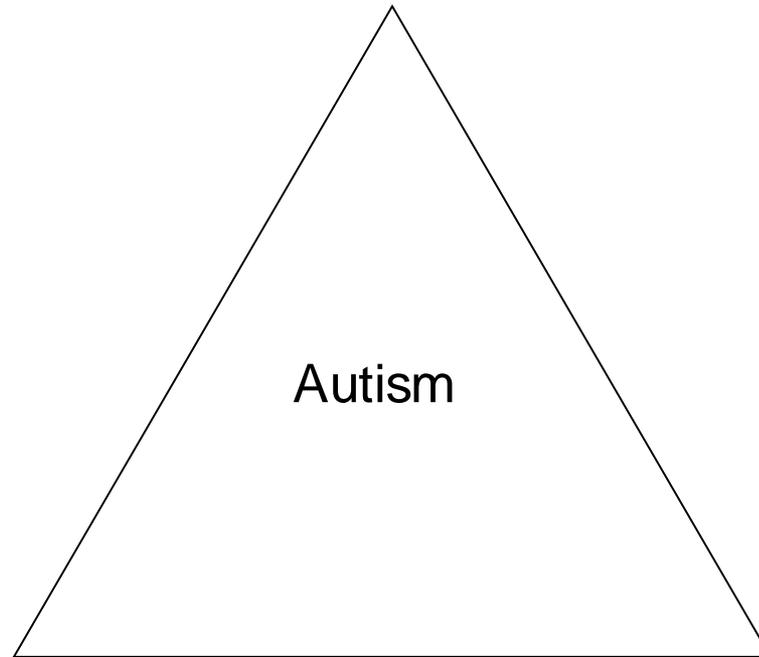

# Autism is Behaviorally Defined

Wing's Triad  
(Wing & Gould, 1979)

Impaired Imagination,  
Restricted and Repetitive Behaviors

Impaired Social  
Interaction

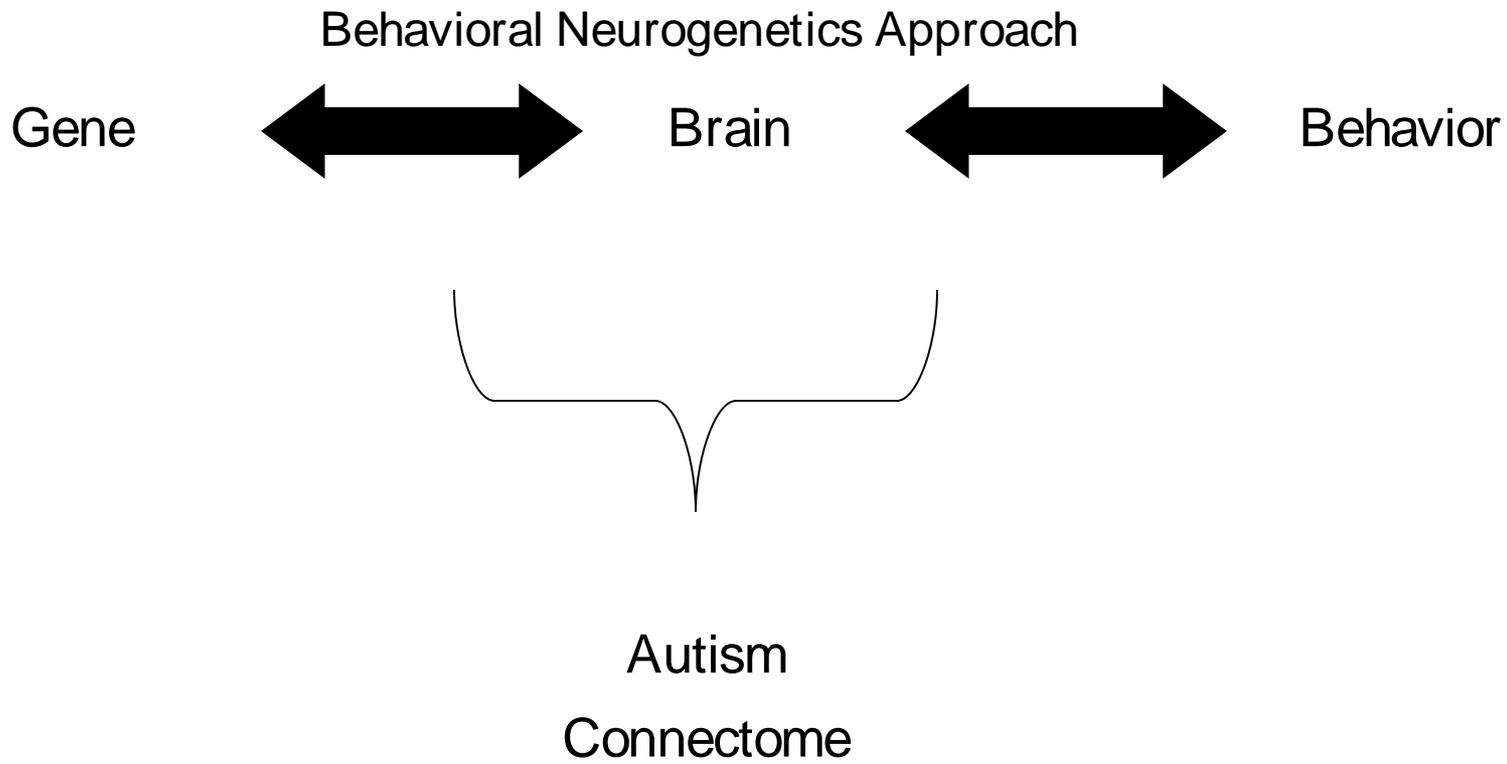

Impaired  
Communication

DSM-IV-TR classifies Autism by deficits in these three domains.

Nature Precedings : doi:10.1038/npre.2008.2724.1 : Posted 27 Dec 2008

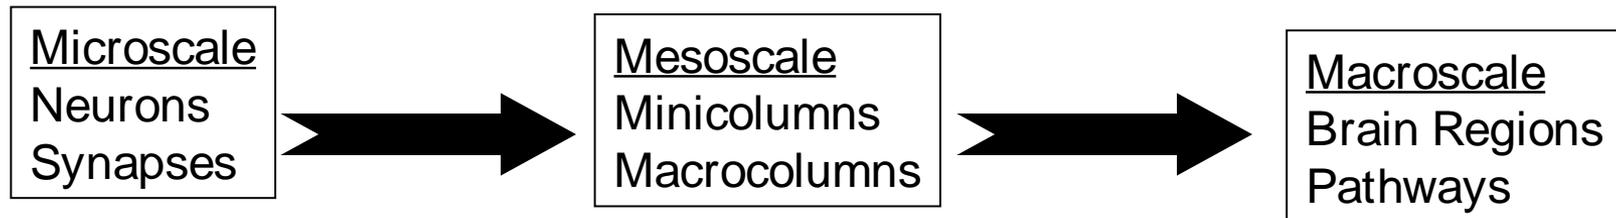

Hypothesis: Dysfunctional networks of facial affect processing may contribute to the impairment in autism social behavior.

## The Human Connectome is Comprised of Neural Elements and Their Connections

Connectome refers to the “ connection matrix of the brain”

Neural elements are defined at multiple scales.

## Functional Autism Connectome

Microscale

- Neuronal Circuit Development
- Genetic Model for Functional Synaptic Communication

Mesoscale

- Implications of Minicolumns to Macroscale Function

Macroscale

- Functional Connectivity (FC) of Autism Affective Face Processing Networks (AFP<sub>N</sub>)

## A Genetic Model of Autism is Fragile X (FX)

(Hagerman, 2005 and 2007)

~30% of FX individuals have autism

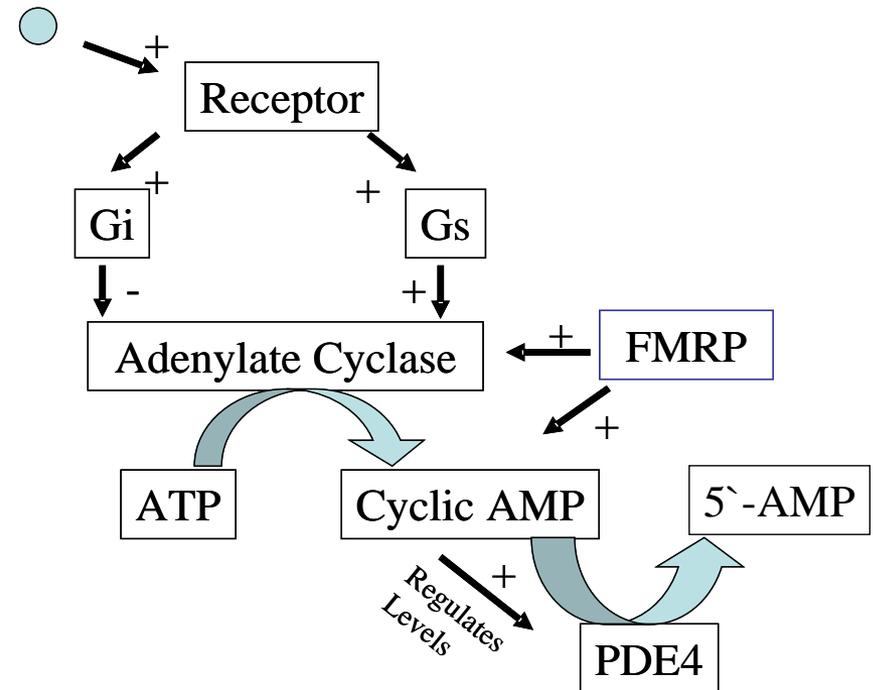

-Fragile X Mental Retardation Gene (FMR1) codes for FMRP, an mRNA shuttle

-In FX, CGG repeat expansion leads to FMRP loss

-FMRP binds mRNA of AC, an enzyme producing cyclic AMP (cAMP)

(Brown V et al., 2001; Miyashiro KY et al., 2003)

-Microscale Functional cAMP Signaling may Affect Neuronal Communication in the Autism Connectome

The Cyclic AMP Cascade

Microscale

cAMP Signaling in Autism

FX cAMP induction

cAMP-GEFII is a cAMP target involved in exocytosis (Ozaki et al., 2000) and variants in its gene are associated with autism susceptibility (Bacchelli, 2003)

The mGluR8 receptor has an inhibitory effect on cAMP signaling; and, variants in the mGluR8 gene, GRM8, are associated with an increased susceptibility to autism (Serajee, Zhong et al. 2003)

## Microscale

### Cyclic AMP involvement in Social and Emotional Behavior in Autism

#### Opiate Theory of Autism

Autism behavior is related to a hyperactive opiate system (Panksepp 1979)

Opioids reduce the ability of adenylate cyclase to produce cAMP

(Koski and Klee 1981; Childers, Nijssen et al. 1986; Childers 1988; Prather, Tsai et al. 1994).

Opioid antagonist (naltrexone) improves autism behavior in some patients

(Kolmen, Feldman et al. 1995; Riddle, Bernstein et al. 1999; Elchaar, Maisch et al. 2006)

#### Fetal Valproate Model of Autism

Fetal exposure to the maternal anti-epileptic valproate increases incidence of autism

(Williams, King et al. 2001).

Valproate reduces stimulated, but not basal, cAMP levels

(Montezinho, Mork et al. 2007).

Behaviors of mice exposed to valproate parallel autism

(Ingram, Peckham et al. 2000; Wagner, Reuhl et al. 2006).

Valproate produces overconnectivity of cortical microcircuitry

(Rinaldi, Silberberg et al. 2007)

## Microscale

## Association between Cyclic AMP and the Functional Connectome

In Aplysia, cAMP can affect structural and functional neural connectivity through synaptic strengthening and formation of presynaptic terminal varicosities

(Schacher et al., 2003)

In rat, cAMP impedes oscillations in parietal cortex upon stimulating the insula

(Yoshimura et al. , 2006)

## Minicolumns are the Basic Anatomical and Functional Unit of Cortex

(Buxhoeveden et al., 2002)

Minicolumn  
~30 micron diameter  
~80-100 neurons  
“ pearls on a string”

(LaBerge, 2006)

Macrocolumn  
~40-80 minicolumns  
~0.3-1 mm

(Rockland et al., 2004)

Autism has an Increased Number of Smaller, Less Compact Minicolumns

(Casanova et al, 2002)

Nature Precedings : doi:10.1038/npre.2008.2724.1 : Posted 27 Dec 2008

# Theories Linking Macroscale Connectome Dysfunction to Autism Behavior

Weak central coherence (Frith, 1989)

Impaired feature maps (Gustafsson, 1997)

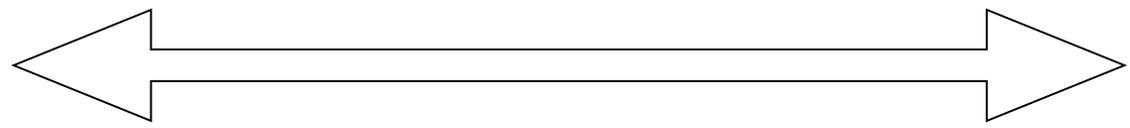

Amygdala theory (Baron-Cohen et al., 2000)  
(Howard et al., 2000)

Temporal binding deficit (Brock et al., 2002)

Increased Excitation/Inhibition (Rubenstein et al, 2003)

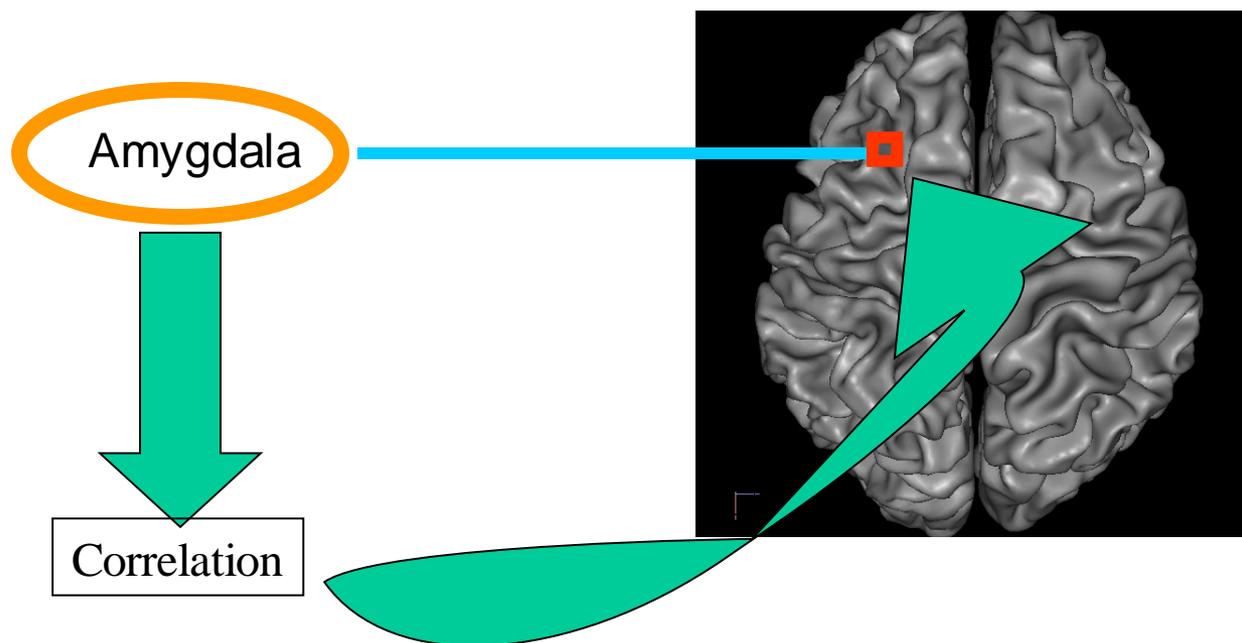

Underconnectivity hypothesis (Just et al., 2004)

Macroscale  
Autism  
Connectome

Autism  
Behavior

The integrity of functional amygdala circuitry is altered in autism and contributes to task performance behavior.

## Macroscale Network Descriptors to Interpret Results

### Behavioral catalysts

Nodes involved in transitioning between brain states (McIntosh 2004).

### Multivariability

The ability to form multiple brain states (Fingelkurts and Fingelkurts 2004)

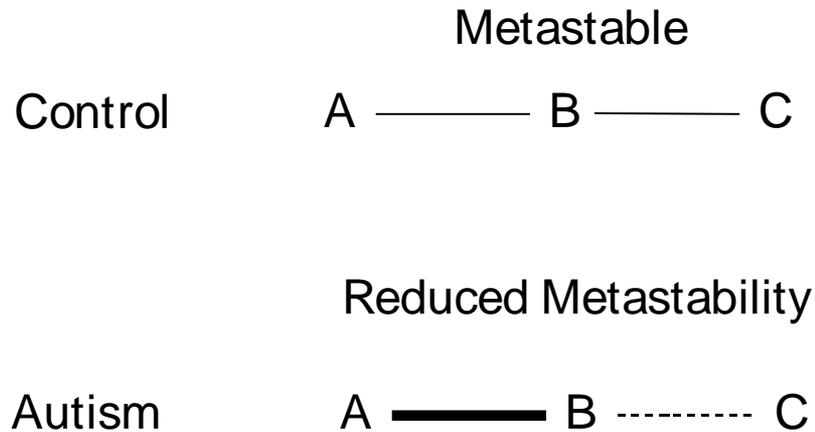

### Metastability

The tendency of brain regions to be both functionally segregated and integrated (Bressler 2003; Fingelkurts and Fingelkurts 2004)

## Metastability

The tendency of brain regions to be both functionally segregated and integrated

(Bressler 2003; Fingelkurts and Fingelkurts 2004)

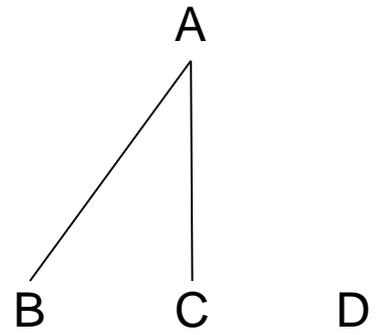

# Behavioral Catalyst

Nodes involved in transitioning between brain states

(McIntosh 2004)

Resting State

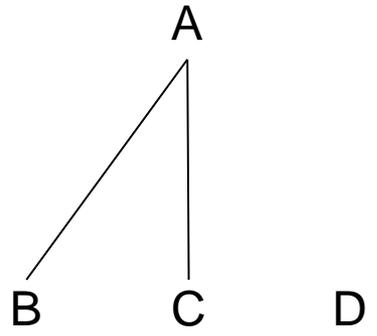

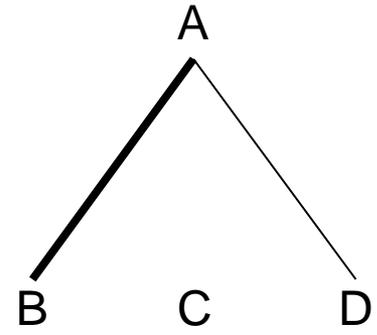

Node A is a Behavioral Catalyst

Node A has Reduced Behavioral Catalysis

Emotional Face Processing State

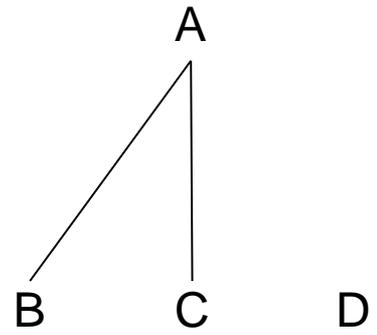

Nature Precedings : doi:10.1038/npre.2008.2724.1 : Posted 27 Dec 2008

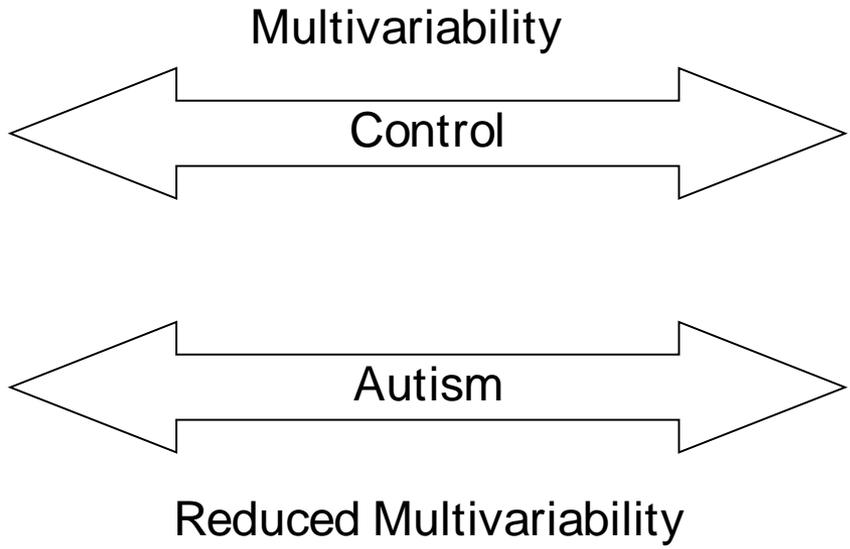

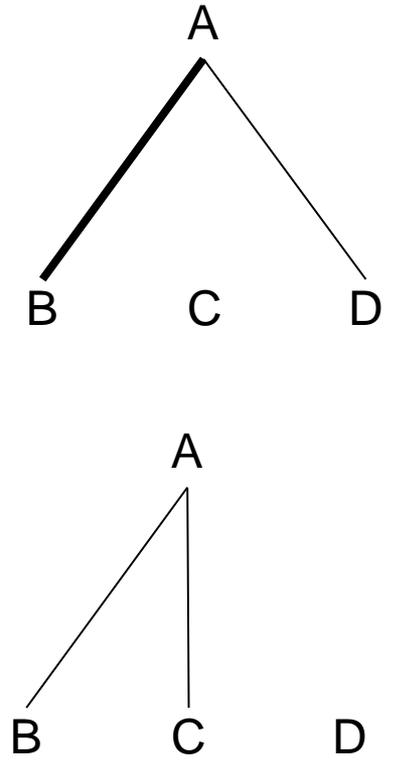

### Multivariability

The ability to form multiple brain states  
(Fingelkurts and Fingelkurts 2004)

Resting State

Emotional Face Processing State

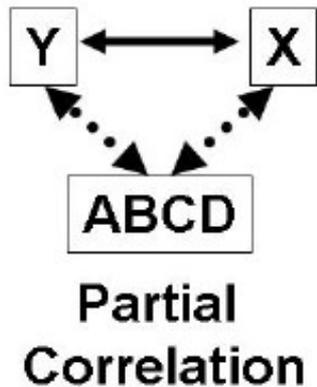

Nature Precedings : doi:10.1038/npre.2008.2724.1 : Posted 27 Dec 2008

Dysfunctional amygdala connectivity can be distinguished among emotional and neutral face processing networks and resting networks using partial correlation analysis.

Altered connectivity with the amygdala is predictive of autism behavior.

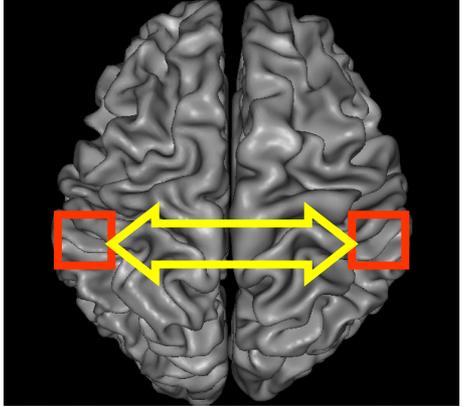

Reduced behavioral catalysis, reduced metastability, and reduced multivariability are consistent features in the autism connectome.

Kelley DJ. Functional connectivity of affective face processing networks in autism [dissertation]. [Madison (WI)]: University of Wisconsin, Madison; 2008 Fall. Chapter 3, Amygdala Connectivity in Autism Affective Face Processing Networks; p. 51-109.

Kelley DJ. Functional connectivity of affective face processing networks in autism [dissertation]. [Madison (WI)]: University of Wisconsin, Madison; 2008 Fall. Appendix 5, Statistical Approaches to Functional Connectivity of Brain Networks; p. 340-375.

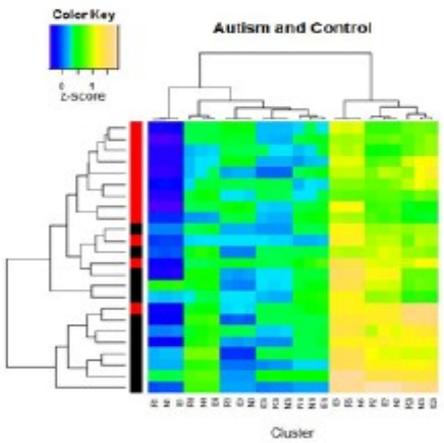

Nature Precedings : doi:10.1038/npre.2008.2724.1 : Posted 27 Dec 2008

Autism behavior is associated with dysfunctional interhemispheric connectivity in emotional and neutral face processing networks and resting networks.

Interhemispheric Partial Correlation

Kelley DJ. Functional connectivity of affective face processing networks in autism [dissertation]. [Madison (WI)]: University of Wisconsin, Madison; 2008 Fall. Chapter 5, Pattern Visualization of Interhemispheric Affective Face Networks in Autism; p. 162-188.

Patterns of functional interhemispheric connectivity can be visualized with agglomerative hierarchical cluster analysis, undirected graph theory, and multidimensional scaling approaches

Kelley DJ. Functional connectivity of affective face processing networks in autism [dissertation]. [Madison (WI)]: University of Wisconsin, Madison; 2008 Fall. Chapter 5, Pattern Visualization of Interhemispheric Affective Face Networks in Autism; p. 162-188.

## Conclusion

Dysfunctionally connected amygdala and interhemispheric affective face processing networks (AFPN) and connectome-behavior relationships distinguish autism and controls.

We reject the underconnectivity hypothesis as a generalizable connectivity framework.

Reduced behavioral catalysis, reduced metastability, and reduced multivariability were consistent AFPN features in the autism connectome.
