Interleukin 21: combination strategies for cancer therapy

Kresten Skak, Michael Kragh, Diana Hausman, Mark J. Smyth & Pallavur V. Sivakumar

Nature Reviews Drug Discovery published online: 08 February 2008 | doi:10.1038/nrd2482

In the Conclusions, there is an error in the sentence that says:

We believe that the chances are small that IL21 as monotherapy or combination therapy may be efficacious in late-stage cancers such as stage IV metastatic melanoma or renal cell carcinoma.

The correct version is:

We believe that IL21 as monotherapy or combination therapy may be efficacious in late-stage cancers such as stage IV metastatic melanoma or renal cell carcinoma.
