Measuring selection in contemporary human populations

Stephen C. Stearns, Sean G. Byars, Diddahally R. Govindaraju and Douglas Ewbank

Nature Reviews Genetics 11, 611–622 (2010)

In Box 3 of the above article, two equations were given incorrectly. In the second column of the table, last row, the correct equation is:

$$(\pi_1 \times F_1 \times p_1 + (1 - \pi_1) \times p_2 \times F_2) / F - \pi_1$$

where F is the fertility rate for the total population.

In the third column, last row, the line should begin with a lower case g , to indicate simple covariance, and not G , which indicates the matrix. The correct equation should read:

$$g \times \text{Cov}(F, \text{SBP}) / \text{Var}(\text{SBP}_1) = h^2 \times \text{Cov}(F, \text{SBP}) = g \times b$$
