

CELL OF THE MONTH

This month's winning image was submitted by Yu-Tzu Tai (University of Cambridge (ytt21@cam.ac.uk)). It shows neural progenitor cells expressing tyrosine hydroxylase.

Green fluorescence represents β -tubulin staining; red fluorescence represents tyrosine hydroxylase staining; and blue fluorescence represents glial fibrillary acidic protein staining. The image was acquired using an optical microscope (DMRD, Leitz). Bar, 40 μ m.

We are pleased to acknowledge the help of our two external advisors, Ariel Ruiz i Altaba (Developmental Genetics Program, New York Medical Center) and Lelio Orci (Department of Morphology, University Medical Center, Geneva).
