Identity crisis for adult periventricular neural stem cells: subventricular zone astrocytes, ependymal cells or both?

Andrew K. Chojnacki, Gloria K. Mak & Samuel Weiss

Nature Reviews Neuroscience **10**, 153–163 (2009)

On page 159 of the above article, the sentence “Disrupting the function of proteins such as dynactin 1 (REF. 110), LIS1 (also known as PAFAH1B1)¹¹¹ or CEP120 and TACC¹¹², which are required for appropriate interkinetic nuclear migrations in the adult brain, would provide insight into the process of adult neurogenesis” should have read: Disrupting the function of proteins such as dynactin 1 (REF. 110), LIS1 (also known as PAFAH1B1)¹¹¹ or CEP120 and TACC¹¹², which are required for appropriate interkinetic nuclear migrations during CNS development, in the adult brain would provide insight into the process of adult neurogenesis.
