Surgical management of female SUI: is there a gold standard?

Ashley Cox, Sender Herschorn & Livia Lee

Nat. Rev. Urol. 10, 78–89 (2013); doi:10.1038/nrurol.2012.243

In the version of this article initially published online and in print, the last sentence of the Abstract and the last sentence of the Conclusions were incorrect. Both should read "Based on the literature a new gold standard first-line surgical treatment for women with SUI is the synthetic midurethral sling inserted through a retropubic or transobturator approach." The error has been corrected for the HTML and PDF versions of the article.
