Stress-induced NQO1 controls stability of C/EBP α against 20S proteasomal degradation to regulate p63 expression with implications in protection against chemical-induced skin cancer

BA Patrick and AK Jaiswal

Oncogene (2017) 36, 2920; doi:10.1038/onc.2016.476; published online 6 March 2017

Retraction of: *Oncogene* (2012) 31, 4362-4371; doi:10.1038/onc.2011.600; published online 16 January 2012

Following an internal investigation by the University of Maryland, Baltimore, the Editors and Publisher have agreed to retract this

paper owing to the results of the investigation concluding that Figure 2 does not support the claim of presenting new data from keratinocytes.
