Correction to: *Leukemia*
<https://doi.org/10.1038/s41375-020-01092-2>

We have noticed a minor error in “Fig. 3” of the online document, which was introduced during corrections of the proofs when we were asked to add in a description of each panel for the figure.

Everything is correct except in the description/legend at the bottom. To match the label above each panel, the description should have the word “*NOT*” added into

sections **b** and **d**. The legend should read: Fig. 3: Kaplan–Meier Curves for Overall Survival by Entry Criteria and IPSS. **a** Depicts overall survival for all patients by eligibility criteria (adverse MDS risk versus standard risk with severe cytopenia) and **b** for only those *NOT* undergoing HCT. **c** Depicts overall survival for all patients by IPSS risk (low or intermediate-1 versus intermediate-2 or high-risk disease) and **d** for only those *NOT* undergoing HCT. Log-rank testing was used for group comparison.

The original article has been corrected.
