It has come to our attention that there is an error in Supplementary Table 6—Oligonucleotides used in the Study, which arose due to an incorrect copy/paste.

Specifically, the sequence shown in this table for three oligonucleotides (CRNDEgen F1, CRNDEgen R1, and CRNDEgen R2) was incorrect. These are the primers used

for the genotyping PCR to screen clones following CRISPR-mediated deletion of exons 4–6 of the CRNDE gene. The table with the correct sequences for these three oligonucleotides is attached.

This error does not affect any of the data or conclusions of the paper and all of the figures remain unchanged. It was simply that the incorrect oligonucleotide sequences were copied into the original Table S6.

The original article was updated.
