**Fig. 1** RCP downregulates E-cadherin expression. **a** The cells were transfected with indicated vectors for 48 h. The cell lysates were subjected to immunoblot analysis (top). Densitometric analysis (bottom; mean  $\pm$  s.d. \* $P < 0.05$  and \*\* $P < 0.01$  versus control vector). **b** The cells were transfected with indicated vectors and the expression of E-cadherin was visualized by immunofluorescence. Original magnification,  $\times 200$ ; scale bar, 20  $\mu\text{m}$ . Representative results were presented from at least three independent experiments with similar results
