Correction to: *Pediatric Research* <https://doi.org/10.1038/s41390-023-02525-1>, published online 18 February 2023

The original article unfortunately contained some mistakes. Firstly, the sentence “Antibiotic exposure in labour  $\geq 4$ -h was associated with increase in fat mass index at 5-months ( $\beta$  0.42 [95% CI:  $-0.03$ , 0.80],  $p = 0.03$ )” in the abstract was corrected to read “Antibiotic exposure in labour  $\geq 4$ -h was associated with increase in fat mass index at 5-months ( $\beta$  0.42 [95% CI: 0.03, 0.80],  $p = 0.03$ )”. In the ‘Results’ section, the sentence “However intrapartum exposure to

antibiotic  $\geq 4$ -h duration was independently associated with fat mass index at 5 months ( $\beta$  0.342 [95% CI: 0.032, 0.80],  $p = 0.03$ ) (Table 3)” was corrected to “However intrapartum exposure to antibiotic  $\geq 4$ -h duration was independently associated with fat mass index at 5 months ( $\beta$  0.42 [95% CI: 0.03, 0.80],  $p = 0.03$ ) (Table 3)”. Finally in table 3, the data in the row ‘Fat mass index at 5 months’ and under the column ‘Sensitivity analysis: IAP  $\geq 4$  h exposure’ was corrected from “0.42 ( $-0.030$ , 0.80)” to “0.42 (0.03, 0.80)”. The original article has been corrected.
