published online 16 January 2020

Following publication of this article, the authors noticed that some of the values reported in the ‘Results’ section were incorrect. The sentence: ‘Of the 106 chest illnesses,

85% ($n = 90$) were associated with phlegm, **76% ($n = 81$)** with cough, and 61% ($n = 65$) with wheeze’ has now been corrected to: ‘Of the 106 chest illnesses, **76% ($n = 81$)** were associated with phlegm, **83% ($n = 88$)** with cough, and 61% ($n = 65$) with wheeze’. This has been corrected in both the PDF and HTML versions of the article.
