Light the beacon

As patient expectations of dental implants continue to increase, it is essential practitioners implement solutions that can help improve the efficacy of treatment. That's why W&H offers the new Osstell Beacon handheld device, which is an excellent diagnostic tool designed to complement your digital workflow.

Using proprietary and evidence-based Resonance Frequency Analysis (RFA) technology, this intuitive device enables clinicians to assess osseointegration by identifying the best possible time to load an implant – all in a matter of seconds.

The Osstell Beacon offers an efficient, accurate, and non-invasive way of determining implant stability based on qualifiable data, thus enhancing osseointegration and the healing process.

This ensures clinicians are able to improve the quality of treatment by achieving more predictable outcomes.

Cleaning products that go the extra mile

Effective decontamination protocols and cleaning regimes are the key to preventing the spread of illnesses in aesthetic settings.

But are your cleaning products up to scratch? Stop pathogens in their tracks by using the Steri-7 Xtra range of disinfectants from Initial Medical.

Able to deactivate 99.9999% of all pathogens including viruses, yeasts, spores, bacteria and fungi, these multi-purpose cleaners can be used around the whole of your salon, clinic or studio, providing effective defence against the spread of diseases. They also form a barrier that

prevents pathogens recolonising for up to 72 hours after application.

Find out more by contacting Initial Medical on 0870 850 4045 or visiting www.initial.co.uk/medical.

Perfect preparation

In order to cleanse assiduously before endodontic therapy, the canals must be enlarged and shaped properly.

Endodontic practitioners should try HyFlex EDM NiTi files, available from COLTENE.

HyFlex EDM NiTi files are your tools for perfect preparation. Stronger, up to 700% more fracture resistant, yet flexible too you will find that fewer files are needed

for perfect preparation. Crucially, the root canal system will remain uncompromised, because the files follow the anatomy, reducing the risk of injury and damage.

COLTENE is committed to innovation; to improve workflow and give endodontic specialists the tools they need for excellent, stable results. To find out more visit www.coltene.com, email info.uk@coltene.com or call 01444 235486.
