Introducing the newest player in town

Kent Brushes is delighted to reveal its new UK range of oral health products, including its star of the show – the SONIK electric toothbrush.

The SONIK uses advanced fluid dynamics sonic pulse technology, so this toothbrush effectively cleans the surface and between teeth. Features include:

- 36,000 sonic pulses for a deeper clean
- Smart two-minute timer and three bespoke brush modes
- High-quality, individually rounded bristles for optimal performance
- 45 days of battery life with super-fast charging in two hours
- Ultra-slim, lightweight and waterproof design.

SONIK is available in pearl pink or graphite and can be bought as a standalone or as part of Kent's SONIK starter kit. This includes everything your patients will need to get started, including:

- SMILE Silver and Charcoal-Infused Toothbrush
- BRILLIANT Whitening Toothpaste 75ml
- BRILLIANT Toothpaste Tablets Jar 62 Tabs
- BRILLIANT Mouthwash Concentrate 50ml
- BRILLIANT Mouthwash Glass
- SMILE Interdental Brushes: 6 pack 0.4mm, 6 pack 0.6mm, 6 pack 0.8mm.

There is also a subscription service for all the products in the starter kit to complement the effectiveness of the SONIK, ensuring patients can stay fully stocked for success between appointments.

Early detection in 15 minutes or less

All too-often, oral cancer is detected in the late stages. This can make treatment difficult, and heavily impact patients' quality of life. When detected in stages I and II, the chances of survival are doubled.

As such, routine screening for oral cancer is essential and the BeVigilant OraFusion System from Vigilant Biosciences produces a simple and accurate risk assessment to aid in early detection.

The non-invasive tool analyses saliva and, in 15 minutes or less, produces a report of either low, moderate, or elevated risk levels associated with oral cancer, to assist dentists in their decision making.

For more information about what could be a truly life-changing, pre-diagnostic test, visit www.vigilantbiosciences.com or email info@vigilantbiosciences.com.

Minimally invasive concepts to support holistic dentistry

Modern dentistry is now largely focussed on minimally invasive concepts, which focus on prevention and minimal intervention.

The benefits to the patient are far-reaching: less surgery times, quicker healing and greater patient comfort can make the experience all the more pleasant compared to a traditional approach. To ensure that your skills are up-to-date, consider attending one of various training opportunities provided by Ucer Education.

Specialist Oral Surgeon Professor Cemal Ucer and his team will guide you through cutting-edge concepts and techniques, teaching all the relevant information you need in order to practise minimally invasive concepts safely and effectively. Training is

available in minimally invasive extractions and management of tooth loss with socket grafting or immediate implants, among other topics.

To find out more, contact Professor Ucer at ucer@icedental.institute or Mel Hay at mel@mdic.co; call 01612 371842 or visit www.ucer-clinic.dental.
