Your BDA Library service is available at the touch of a button - you don't need to visit us to make use of our resources, which include eJournals, document supply service, evidence-based literature searches, and over 660 eBooks.

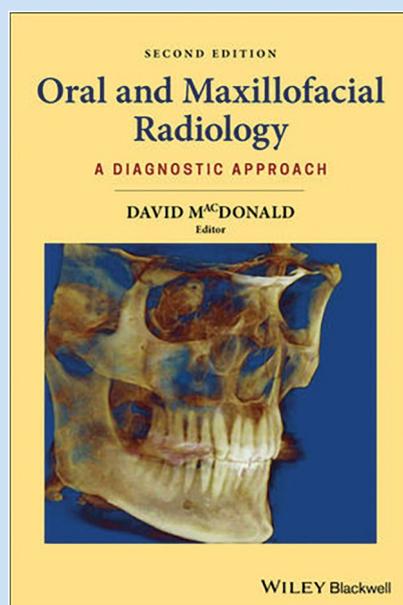

INNOVATIONS IN PREVENTIVE DENTISTRY

Christian Splieth (editor)
2021; Quintessence
399 pages
eISBN 9783868675627

Preventive dentistry is a constantly changing and developing field: As new research emerges, some practices that had once been revolutionary are abandoned, while others continue to withstand the test of time. This book discusses new developments and innovations in preventive dentistry, from primary prevention to secondary prevention by inactivating initial lesions, and on to

tertiary prevention to avoid subsequent progression and complications of manifest oral disease.

The book relies on a sound evidence base and instructs readers how this can be translated into clinical dental practice – what changes should be made to how we practice and why they should be made. Topics include caries and periodontal disease, orthodontic problems, diagnostic approaches, diet and oral health, oral hygiene, oral disease patterns, caries treatment, fluoride guidelines, risk management, sealants, and probiotics.

ORAL AND MAXILLOFACIAL RADIOLOGY: A DIAGNOSTIC APPROACH

David MacDonald (editor)
2019; John Wiley & Sons.
653 pages
eISBN 9781119218715

Oral and Maxillofacial Radiology: A Diagnostic Approach, Second Edition is a revised edition of this illustrated reference to the wide range of diagnostic imaging modalities available for investigating lesions affecting the face and jaws. Written by experts in various specialty areas, including medical radiologists, oral and maxillofacial radiologists, functional imaging specialists, and radiation oncologists, the book includes more than 450 clinical images demonstrating the concepts discussed, with more images covering cone beam computed tomography, positron emission tomography, and interventional procedures. Extensive flowcharts are provided,

detailing the steps of diagnosis and decisions and presenting practical approaches which focus on the most important and frequently encountered lesions. Differences in the demographic, clinical and radiological presentations are discussed, along with differing outcomes of treatment due to ethnicity. The book is built on a solid evidence base and includes full references to the scientific literature.
