

FREE CPD ON ENAMEL EROSION

Regenerate has launched a new learning portal focussed on enamel erosion which provides free CPD for dental professionals.

A core feature of the Learning Resources portal is five CPD modules, each of an hour in length, which cover different aspects of erosive enamel wear:

New Perspectives on Enamel Erosion:
From Diagnosis to Prevention

- Enamel Erosion: Tooth Wear
- Enamel Erosion
- Enamel Erosion: Diagnosis
- Enamel Erosion: Unilever Lunch and Learn.

Each of the five free e-learning modules confers an hour of verifiable CPD, and is accredited by Healthcare Learning. A downloadable certificate is provided on completion of each of the modules.

Unilever sponsored an expert symposium at IADR 2018 in London which featured some of the world's leading experts in the field of enamel erosion including Professor Bartlett, Professor Buzalaf, Professor Unwin & Dr Joiner who discussed 'A Clinical Perspective on the Erosion Challenge: Diagnosis to Prevention'. It is possible to view a film of the expert symposium on the CPD portal - which is the next best thing to actually attending the event.

In addition, the portal features a number

of clinical papers about the technology behind the REGENERATE Enamel Science range which is the first oral care regime with NR-5 technology able to regenerate enamel mineral. A summary document containing all the studies can also be downloaded.

Videos demonstrating the mode of action of the REGENERATE Enamel Science Advanced Toothpaste and Advanced Enamel Serum can also be viewed on the portal.

In addition, a downloadable guide to diagnosing enamel erosion in clinic as well as a range of patient brochures, clinic posters and leaflets about enamel erosion are available. Dental professionals can also link to the Erosive Tooth Wear Foundation and access a range of videos featuring Professor David Bartlett explaining enamel erosion.

The next free verifiable CPD session is a webinar lecture delivered by Dr Ben Atkins (pictured), President Elect of the Oral Health Foundation in September 2019, on the Healthcare Learning platform. A link to the webinar will be available on the portal in due course.

The portal is free for all dental professionals and can be accessed here: <https://www.regeneratenr5.co.uk/pages/learning-resources>.

RELIABLY PACK, STORE AND VALIDATE YOUR DENTAL INSTRUMENTS

Hygopac View, from Dürr Dental, is an intelligent rotary sealing device which ensures instruments can be reliably packaged, stored and validated in sterile conditions. Obviously, there is no room for error when it comes to reprocessing instruments that have come into contact with patients' skin, mucous membranes or blood. Every step in the packaging process must be tested, but also simple to operate, bearing in mind the repetitive nature of such a task. Hygopac View has an intuitive touch display, which takes the operator through the step-by-step process, providing the necessary validation once completed. The sealing temperature, contact pressure and sealing speed are continuously recorded, checked and saved to an SD card or to the network via the VistaSoft Monitor software. This allows effortless processing of the data for documentation within a quality management system. In the event of a practice inspection, the information is available immediately.

As well as offering great flexibility and reliability in terms of process documentation, HygoPac View also boasts an exceptionally efficient design, which is a bonus as it's often used in areas that have limited space.

If you would like to promote your products or services direct to the dental industry in BDJ Team, call Andy May on 020 7843 4785 or email a.may@nature.com.
