

DESIGNED TO HOLD TEETH IN PLACE

Dentsply Sirona offers SureSmile Retainers as part of its SureSmile Clear Aligner system to help prevent teeth relapse and maintain patients' beautiful smiles. They are durable to withstand oral forces, including teeth grinding, without compromising effectiveness.

This newest addition is a part of the brand's ongoing commitment to provide dentists with clear aligner solutions for a comprehensive treatment approach across the patient journey. As part of its efforts to promote World Oral Health Day 2022, Dentsply Sirona recognises that oral health is central to every person's overall health, happiness and wellbeing and is dedicated to making a positive impact on the oral health

– and the quality of life – of people around the world.

The new SureSmile Retainer is designed for 12-month wear, to maintain the alignment of teeth at the end of treatment to help keep a beautiful smile. SureSmile Aligners are designed to move teeth, while SureSmile Retainers are designed to hold teeth in place to prevent teeth relapse. SureSmile Aligners and Retainers have the strength to protect teeth from damage caused by bruxing or grinding without compromising clinical effectiveness [when under orthodontic treatment and used as prescribed].

By drawing on 20 years of experience in digital planning for orthodontic treatment, SureSmile combines its unique understanding of patients' needs with advanced materials and technology to provide highly predictable treatment plans with a comfortable and streamlined experience, fuelled by results, to give patients the confidence boost that comes with a straighter smile.

WILL NEVER LEAVE YOU OUT IN THE COLD

Where dentures are damaged and in need of repair, a high-performance acrylic can make a world of difference to patient satisfaction, and boost the overall longevity of the appliance.

Kemdent Simplex Cold Cure Acrylic for dental technicians allows you to create extremely durable additions, repairs and relines for existing dentures. It can be cured quickly using a hydroflask, or left to self-cure in just 20 minutes. This gives you both flexibility and convenience, allowing you to work efficiently however you see fit. The mix is great to handle and shape, and thanks to its viscosity can be poured in an easily controlled way.

Simplex Cold Cure Acrylic is not just quick and convenient – it produces excellent results. Once mixed it has a remarkably low residual monomer level. This makes the restored denture more comfortable and less porous in the oral environment, while also being stronger and aesthetically satisfying.

For more information about Kemdent Simplex Cold Cure Acrylic, or any other market-leading solutions available, visit www.kemdent.co.uk or call 01793 770 256.

UPGRADE YOUR INFECTION CONTROL

From SciCan, the STATIM B is a compact 6-litre vacuum autoclave with:

- Flexible loading
- Shorter cycle time
- Enhanced digital capabilities!

Streamline your infection control so it's an ART form – sterilised dry-wrapped loads in as little as 27 minutes.

The STATIM B can be programmed to heat before you open, saving time without

compromise to its exceptional performance.

Other features are one-handed opening, cycle logging, data storage and traceable load release, also handy maintenance reminders and video tutorials!

SciCan is part of the COLTENE group, that manufactures tools, equipment and materials for better practice in different treatment areas.

For details on the STATIM B, visit <https://www.scican.com/eu/products/autoclaves/statim-b/>.

For more on COLTENE, visit www.coltene.com, email info.uk@coltene.com or call 0800 254 5115.
