

A SMART UPGRADE FOR YOUR ORAL HEALTH ROUTINE

As Artificial Intelligence makes its way into almost every facet of life, it makes sense that our oral health routine gets a smart upgrade too. Oral-B is pleased to announce its latest technological innovation: Oral-B iO 10 with iOSense.

The new iO10 with iOSense, the latest addition to the iO range, is set to revolutionise the way we brush our teeth with a personalised experience like never before. It is accompanied by a smart device called iOSense, which offers real-time guidance with the aid of AI and a personalised brushing experience that ensures healthier gums and teeth.

It guides you when to brush: the iOSense has a timer for optimal brushing time and a Wi-Fi clock. It also tells you where to brush: the intuitive iOSense lights mean you'll never

miss a spot. And last, but not least, it tells you how to brush: the Oral-B App tracks your goals and provides personalised feedback after every brushing.

Oral-B iO's revolutionary micro-vibration technology removes 100% more plaque than a manual brush to give you that professional clean feeling, at home, improving your oral health and contributing to better overall body health. However, it's not only about what the iO can do, it's also about how it makes you feel. Using iO10 is a truly sensorial experience that will transform the act of brushing into something you have to do into something you want to do.

The Oral-B iO 10 Design comes in two new galactic-inspired brush designs, cosmic black and stardust white.

ERGONOMIC PERFECTION FOR TOTAL CONTROL

Belmont's new flagship treatment centre, the Eurus S6, exudes refinement with a contemporary design that has the Belmont renowned below-the-patient swing-arm delivery system and powerful intuitive touchscreen for advanced instrument control.

The clear and logical touchscreen offers one touch control across a wide range of functions including: handpiece flushing, spittoon valve cleaning, micro motor speed control, turbine speed limiting, optic on/off, scaler settings, spittoon bowl flushing, dental light operating modes and much more.

With an easy-to-read display that tells you all you need to know at a glance, you can pre-programme settings or restore to standard in just one touch. As

a combination this brings a wealth of operating options to the fingertips of the dentist.

The ergonomic functionality allows maximum working space for both operator and dental nurse. With the spittoon rotated 90 degrees, clear access to the left side of the patient allows the

operator to work with ease. Uniquely, this treatment centre allows positioning of the doctor table, instruments, and assistant tray discreetly out of view behind the chair backrest, easing any patient anxiety as they enter the surgery.

New features include a taller backrest cushion with additional lumbar support for unrivalled patient comfort, a wireless foot control as standard for ease of operator positioning with low battery indicator on the touchscreen, plus a wealth of new safety features.

To feel the difference, you're invited to one of Belmont's showrooms to see for yourself. Some things are better **experienced** rather than explained.

A PARADIGM SHIFT IN ELECTRIC TOOTHBRUSH HEADS

With the introduction of the 'ugly duckling' Triple Headed Toothbrush, Trycare have launched a paradigm shift in electric toothbrush heads that makes the Philips Sonicare three times more effective.

The 'ugly duckling' Triple Headed Toothbrush features individual labial, lingual and occlusal orientated brush heads which combine to provide the most thorough toothbrush experience.

Incorporating a built-in bristle indicator to let patients know it's time to change, 'ugly duckling' Triple Headed Toothbrushes are recommended for children eight-years-old and above. They are safe for use with implants and other restorations.

For more information about 'ugly duckling' Triple Headed Toothbrushes, call 01274 885544 or visit www.trycare.co.uk/triple-bristle.
