

FREE SUSTAINABILITY TOOLKIT TO HELP YOU GO GREEN

Greener Dentistry, an advocate for sustainable dentistry, has launched a comprehensive toolkit designed to support dental professionals in their journey towards greener dentistry. The toolkit offers practical and easily implementable sustainability initiatives, addressing the environmental impact of dental practices while understanding the time constraints busy dentists face.

Dentistry has grappled with its ecological footprint like many other industries for years. With substantial waste generation and resource consumption, it has become crucial to find sustainable solutions without compromising the quality of patient care. Recognising this challenge, Davinder Raju, the founder of Greener Dentistry, envisaged a toolkit to break down sustainability into manageable steps.

The toolkit aims to empower dental

professionals to positively impact the environment without adding to their already demanding workload. It guides dentists towards sustainability while maintaining their commitment to exceptional patient care by providing practical eco-initiatives.

The Greener Dentistry toolkit encompasses many sustainable practices, including reducing water and energy consumption, minimising waste production, and adopting environmentally friendly products. The best part is that the entire toolkit is entirely free for all dental professionals, ensuring accessibility for practices of all sizes.

By actively implementing the

toolkit's recommendations, dental professionals can work towards achieving a certain level of sustainability. Once this achievement is reached, they become eligible for an accreditation award from Greener Dentistry. This mark serves as a tangible symbol of their dedication to sustainable practices, aiding in attracting environmentally conscious patients.

FIND ANY PRODUCT IN NO TIME

American Eagle Instruments has presented a new product finder for its extensive product range. This includes items for diagnostics, prophylaxis, restoration, surgery, periodontology, implantology, endodontics as well as instrument cassettes for hygienic reprocessing and storage. At www.am-eagle.de/productfinder, customers have access to the complete portfolio, can quickly and conveniently assemble their order and send it to American Eagle.

The entry via specialist areas and the simple, intuitive navigation direct you quickly to the product you want. Users can configure instruments and take a close look at each item by zooming in, a detailed description facilitates the selection. Customers receive a clear summary of their enquiry, shipping and delivery are handled by the dental trade.

American Eagle focuses on lean processes, time savings and ergonomic comfort. The manufacturer has not only developed the Talon Tough alloy, but also the patented XP Technology, which eliminates the need to regrind instruments. Another innovation is the environmentally friendly and affordable Quik-Tip prophylaxis instruments, whose handles are combined

with exchangeable tips. In case the instrument wears out, only the worn working end needs to be replaced. This sustainable system saves resources and reduces waste.

The new surgical collection also impresses with efficiency and quality. High-quality materials, ergonomic handles and a matt finish to prevent reflections are standard.

The American Eagle surgical range covers 80% of all dental surgical procedures. These and other instruments can be compiled and configured in the product finder, for example the favourite handle with the preferred scaler tip. A great way to reach the desired product quickly and accurately.
