CONVERT SPOKEN LANGUAGE INTO ACCURATE TEXT

Philips Dictation, an innovator in speech recognition technology, has unveiled its ground-breaking new SpeechLive API, a powerful solution designed to elevate dictation workflow efficiency for businesses.

The cutting-edge software empowers companies to seamlessly integrate speech-to-text capabilities into their existing platforms, along with document management, case management, transcription services, and translation services, unlocking a new era of productivity.

Designed to streamline documentation processes, enhance transcription services, and reduce manual intervention, the Azure API Management-based platform is built on unerring safety, stability and accuracy.

New features include the ability to manage dictations and their properties

as well as create, read, update, and delete dictations. The API also supports attachments like images and videos, making it easy to automate the workflow. By capitalising on the latest advancements in speech recognition technology, SpeechLive enables businesses to effortlessly convert spoken language into accurate text.

The cloud-based service is designed for professionals who need to capture and manage dictations efficiently. It allows users to dictate using their preferred device, such as a digital voice recorder or smartphone.

Recordings are then securely uploaded to the SpeechLive platform for automatic transcription or manual transcription by professional typists.

Developers interested in harnessing the power of SpeechLive can access comprehensive documentation, integration guides, and code samples at <https://developers-eu.speechlive.com/>. The website provides a wealth of resources to ensure a smooth and successful integration process.

FAST AND EFFECTIVE TOOTH WHITENING

The result of over 15 years' research and available from Trycare, BlancOne typically produces an improvement of up to four to five shades of white at a very low price and in a comfortable session lasting only a few minutes. In as little as ten minutes you can transform your patient's smile.

Due to its very fast action, BlancOne treatments are not aggressive, do not dehydrate the enamel and do not induce pain or sensitivity, so no desensitising or remineralisation agents are required.

They don't require gingival barriers, which saves time and money, and can be combined within the dental hygiene appointment. They are the ideal add-on to EMS GBT and other forms of prophylaxis treatment.

Offering a new approach to tooth whitening, based upon new photochemical technologies, BlancOne treatments can be repeated regularly and are the gateway to more intensive treatments if required.

BlancOne's photochemical gels include two special components which break down the peroxide in such an effective way and at a speed which cannot be achieved by the chemical reactions of traditional whitening systems.

For further information about BlancOne contact your local Trycare representative, call 01274 885544 or visit www.trycare.co.uk.

TRANSFORM TO A MODERN APPOINTMENT SYSTEM

Patient Bridge, a Sensei product, supports you as you transition to a modern appointment management system, transforming the way you connect with your patients.

With the new upgrade now available, the platform allows your patients to book appointments 24 hours a day, seven days a week, via your website, direct messaging, recalls, or marketing campaigns. This helps to reduce the strain on your non-clinical team, allowing you to keep your business

running 24/7, while maintaining complete control over scheduling. Patient Bridge has been designed to integrate with your existing Carestream Dental practice management software, both R4+ and Sensei Cloud practice management software, ensuring you are able to enhance your patients' experiences.

Get in touch with the Sensei team today and for more information on Sensei Cloud products visit <https://gosensei.co.uk/>.

If you would like to promote your products or services direct to the dental industry in BDJ Team, call Paul Darragh on 020 7014 4122 or email paul.darragh@springernature.com.
