

## SMART CONTROLLED WORKFLOWS AND EXCELLENT PATIENT COMMUNICATION

DS Core is an innovative platform that enables users in practices and labs to take full advantage of digital dentistry, supporting dental professionals throughout the entire treatment continuum. DS Core connects devices and services and facilitates seamless collaboration with specialists, partners and labs, while incorporating tools for personalised patient communication.

Enhanced 'Communication Canvas': this tool makes patient communication illustrative and user-friendly. Various patient images can be arranged and displayed side by side on a digital canvas in 2D and 3D, such as X-ray images, photos, or intraoral scans. Annotations

in the form of text or freehand drawings can now also be inserted into the canvas. In addition, dentists can share these images with patients, making it easy to communicate and enabling them to make informed decisions about their proposed treatment plan while adhering to GDPR and HIPAA guidelines for privacy-compliant data sharing.

Viewer update: the viewer function in DS Core has been enhanced to support additional data formats such as STL and PLY, making the cloud platform a powerful tool for communication and collaboration also for users employing third-party intraoral scanners.

Unified ordering system: DS Core introduces a function that links dental practices with labs and other service providers. Dentists can either collaborate with their preferred lab via DS Core by inviting them to the platform or discover new specialists offering services tailored to their needs. The ordering system simplifies the process of placing and managing orders. An update to the chat function makes communication very simple while increasing the accessibility of the platform via smartphone. In addition, labs now have the option to export their worksheets as a PDF.

DS Core offers dentists an innovative platform for growth and efficiency, empowering them so they can advance with confidence. Images taken with intraoral scanners and 2D/3D X-ray systems from Dentsply Sirona are automatically uploaded, while third-party data can easily be uploaded manually. In addition, patient data and design files can be managed in a centralised location. For instance, design files for a restoration or a surgical guide can be directly opened from DS Core and transferred to the manufacturing unit (Primemill or Primeprint Solution).

## INTERDENTAL BRUSHING, FOR A CLEAN MOUTH AT EVERY AGE

With your support, people can continue to maintain good preventive habits as they get older.

Cleaning interdentally, along with twice-daily brushing, will enable elderly patients to thoroughly remove plaque from between their teeth, to reduce their risk of disease.

Demonstrate how easy this is to do, with CPS Prime interdentual brushes from premium Swiss oral care brand, Curaprox.

Help them select the correct size; the range has options to clean even the narrowest space, gently, with a single movement. Just once, in and out, and they're done.

The click system means they can only need to replace the old brush – simply click it off, and click the new one on. Less cost, less plastic waste.

At every age, dental health is crucial for health and wellbeing. With CPS Prime interdentual brushes and Curaprox, patients can optimise oral hygiene and their daily routines.

For more information, visit [www.curaprox.co.uk](http://www.curaprox.co.uk).
