Correction to: *Bone Marrow Transplantation* <https://doi.org/10.1038/s41409-022-01839-8>, published online 10 October 2022

The color coding for our three subsets of patients were not identical in Figure 1 and Figure 2. While the "therapeutic" subset appears in green in both figures, the "pre-emptive" group appears in blue in Figure 1 and in red in Figure 2. Conversely, the "prophylactic" group appears in red in Figure 1, and in blue in Figure 2. The order the three groups appear in the legend is also different. This presentation may be confusing to future readers, and thus we would like to substitute a new version of this two figures where the sole modification is harmonization of the color coding, and of the order in entries in the legend.

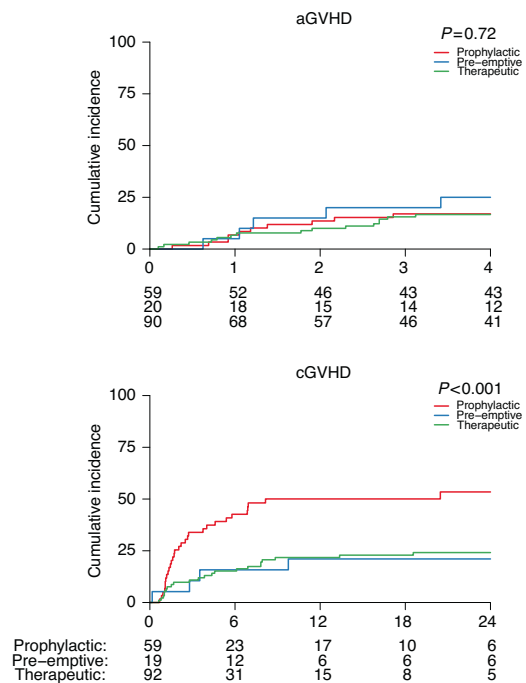

Fig. 1. GVHD according to the reason of DLI for grade II-IV aGVHD and cGVHD.
