

## Pioneering e-learning and educational innovation launched

A pioneering e-learning innovation called MaxFaxBites has been launched by British Association of Oral and Maxillofacial Surgery (BAOMS) President Sat Parmar as a project for his presidential year. The idea was conceived by Consultant Oral & Maxillofacial/ Head & Neck Surgeon Sathesh Prabhu and developed with *British Journal of Maxillofacial Surgery* (BJOMS) Editor in Chief Professor Kaveh Shakib.

Publication of high-quality review articles in *BJOMS* will be linked with a short seven-minute video presentation by the author(s). They will include slides with the presenter's voiceover, and cover the objective of the article/study, summary of methodology and emphasise the outcome/ conclusion and take-home messages.

It has been a long-standing tradition for the BAOMS President to introduce a novel idea, concept or experience to members. Sat Parmar chose as his Presidential initiative the introduction of this method of learning and distributing educational material.

Sathesh Prabhu has just recorded the latest MaxFaxBites video clip on botox and temporo-mandibular joint (TMJ). The short video clips are designed to view on your smartphone or computer. Therefore, whenever you want to catch up with a significant *BJOMS* paper, you can turn to your phone and wherever you are you will find a summary of the paper given by the authors with a presentation of the key findings.

The video and associated paper will also be made available to BAOMS members using WhatsApp or email groups as well as conventional methods such as the BAOMS website, linked to the published article in *BJOMS*. None of the presentations has any patient-identifiable information.

The November 'Bite' is OMFS Professor Peter Brennan's paper on human factors, and the December 'Bite' is on botox and TMJ from Sathesh Prabhu.

To catch up with any of the MaxFaxBites video clips of *BJOMS* papers go to: [bit.ly/2VojvEF](http://bit.ly/2VojvEF).

## Super gentle, massaging and stimulating

With more than two centuries of experience in the dental sector, it's easy to see why so many dental professionals put their trust in Wisdom Toothbrushes.

In fact, the Clean Between Interdental Brushes from Wisdom are the No. 1 selling rubber interdental brushes in the UK.

With a new stronger, flexible, tapered stem, and micro-fine rubber filaments that slide smoothly between the teeth, the brushes make plaque and food removal

simple. With no wire in sight, they are super gentle, massaging and stimulating the gingiva as they clean. Ideal for patients who find wire interdental brushes uncomfortable or difficult to use, they are also latex-free to help prevent issues with allergies and are available in three different sizes.

What's more, they are clinically proven to reduce gum disease – find out more today! Visit [www.wisdomtoothbrushes.com](http://www.wisdomtoothbrushes.com) or call 01440 714800.

## Dental PPE for changing times

A key part of avoiding infection and cross contamination in the dental practice is the quality of your protective personal equipment (PPE).

The bedrock of PPE is gloves. Initial Medical has gloves for every task and every practitioner. There are various options of material (latex, non-latex, nitrile and vinyl), colours and sizes. You can choose powdered or powder free, or fragranced gloves to enhance the patient experience.

Gloves from Initial Medical are safe, compliant and authenticated with the appropriate health and safety standards marks.

Choose gloves from Initial Medical for quality, comfort and to maintain the highest standards of infection control.

For further information please visit [www.initial.co.uk/medical](http://www.initial.co.uk/medical).

## A commitment to quality

TANDEX believes that the perfect product has to start with the highest quality raw materials.

That's why its range of brushes and adjuncts are free from phthalates, PVC, bisphenol-A and other hormone disrupting or harmful substances.

From its headquarters in Copenhagen, TANDEX has complete control over manufacture and production. This means it has been able to develop a range of preventive tools which are consistent with what patients need to maintain optimal oral health.

From the FLEXI interdental brush to PREVENT GEL, all products are enjoyable to use, too.

Try TANDEX, the first name in Danish quality since 1931. For more information on Tandex's range of products, visit [www.tandex.dk](http://www.tandex.dk).
