Please send product news information and images to Kate Quinlan at [k.quinlan@nature.com](mailto:k.quinlan@nature.com). Product news is provided as a service to readers using text and images from the manufacturer, supplier or distributor and does not imply endorsement by the *BDJ*. Normal and prudent research should be exercised before purchase or use of any product mentioned.

## Stop trismus in its tracks

Trismus has many possible causes, including cancer, trauma, TMJ disorders, facial burns and stroke. OraStretch Press Rehab System offers a conservative way to address the limited jaw opening in affected patients.

The hand-operated device is easy for patients to use at home. It uses passive motion to safely stretch the jaw, joint and facial tissues, ultimately increasing mobility and function. With continual and correct use of the OraStretch, patients can commonly achieve 1-2 mm in range of motion per week.

If your patient is suffering with reduced jaw opening, don't let them suffer unnecessarily. Consider the OraStretch Press Rehab System for a conservative start to their treatment.

For more information on OraStretch call Karen Joy on 07468 420496 or email [Karen.Joy@incitomedtech.co.uk](mailto:Karen.Joy@incitomedtech.co.uk) or visit <http://incitomedtech.co.uk>.

## A monolithic new option for all patients

Patients seeking restorative options will undoubtedly be drawn to the most aesthetic option – but for NHS patients these have traditionally been rather limited.

This has all changed with the introduction of Monolith Full-Contour Zirconia from CosTech Dental Laboratory.

Aesthetic, strong and suitable for use on all crown prep designs, this game changing material was designed for NHS patients and is available at just £29.95 per unit, including delivery to and from the laboratory.

Ensure all of your patients can benefit from a more natural-looking choice by contacting CosTech today.

For more information about CosTech Dental Laboratory, visit [www.costech.co.uk](http://www.costech.co.uk) or call 01474 320076.

## Aesthetic amalgam replacement

Amalgam restorations can stain the surrounding teeth, resulting in difficult-to-mask aesthetic defects.

Conquer these challenges by choosing the Pink Opaquer shade of Filtek Universal Restorative from 3M Oral Care.

This new shade of composite has been specially designed to mask metallic defects and stained dentition during restoration. This helps ensure you can create optimal aesthetics, even when replacing amalgam.

By applying a 1 mm layer of the Pink Opaquer followed by a composite layer from the simplified Filtek Universal Restorative shade choice by 3M, you can create aesthetic restorations with beautiful opacity.

For more information, call 0800 626 578 or visit [www.3M.co.uk/Dental](http://www.3M.co.uk/Dental).
