

Maintain exceptional hygiene standards

Nuview is committed to helping dental practices maintain exceptional hygiene standards in accordance with HTM 01-05. That's why it manufactures and distributes its own Continuum range of cleaning and disinfectant products. These alcohol-free, water-based solutions offer effective, long-lasting protection against a wide range of harmful microorganisms.

Always striving to provide helpful advice and guidance, Nuview also offers additional support in the form of team training and

regular swab testing, to help clinicians optimise their infection control procedures.

Contact Nuview to find out how the friendly team could help you achieve high levels of compliance in practice.

For more information please call Nuview on 01453 872266, email info@nuview-ltd.com, visit www.nuview.co or 'like' Nuview on Facebook.

Cable free polishing

To facilitate the No Implantology Without Periodontology (NIWOP) workflow, W&H delivers a complete prophylaxis solution with its extended range of Proxeo products. These include the Proxeo Twist Cordless handpiece, which enables you to polish without worrying about cables getting in your way.

In addition, the Proxeo Aura air polishing system facilitates the effective removal of soft deposits and stains, whether for prophylaxis or periodontal treatment. W&H also offers the innovative Proxeo Ultra piezo scalers – the first systems of their kind to be proven suitable for use on patients with pacemakers.

Discover the new Proxeo product range by visiting the W&H website or contacting the friendly team.

Guided Biofilm Therapy training

EMS and the Swiss Dental Academy (SDA) have announced the spring 2020 schedule for their ever-popular Guided Biofilm Therapy (GBT) events.

The GBT protocol is based on individual patient diagnosis and risk assessment in order to achieve optimal results. The treatment is given in the least invasive way, with the highest level of comfort, safety and efficiency.

In practical terms, biofilm is highlighted with disclosing solution. Both biofilm and early calculus are then gently removed both supra and subgingivally using AirFlow and PerioFlow, both powered by warm water. If needed, this is followed by debridement with No Pain Piezon, which achieves minimally invasive removal of any remaining calculus and mineralised deposits.

Led by the UK's six SDA trainers, each event offers delegates the opportunity to provide patients with the best possible outcomes and

improve job satisfaction.

The half-day GBT masterclass provides the theoretical knowledge to develop strategies for periodontal and implant maintenance by looking at the components of the GBT model including AirFlow, PerioFlow and the advancements in 'No Pain' Piezon technology.

The remaining spring 2020 schedule is as follows:

- Friday 20 March in Coventry with Amanda Gallie
- Friday 20 March in Glasgow Jolene Pinder
- Thursday 26 March in Luton with Juliette Reeves.

Also on the calendar is the full-day GBT theory and hands-on course on Saturday 18 April in London, led by Faye Donald.

To book on to one of these events with the SDA dream team, visit <https://cvent.me/PG4vZ>. For further details about what EMS has to offer dental professionals in the UK, visit www.ems-dental.com.
