Time to leave flash behind

Traditional adhesive flash removal can be a time-consuming and complicated task. Plus, any excess flash that remains can harbour food particles and bacteria, potentially compromising treatment.

So, why not avoid the risk entirely by using an innovative solution such as the APC Flash-Free Adhesive Coated Appliance System from 3M Oral Care?

The brackets feature a resin-soaked non-woven mat base, meaning that they all have the exact amount of adhesive they need to provide a strong bond. This helps to minimise chair time for patients and provides a swift, effective solution without the need for excess flash removal.

To find out more, contact 3M Oral Care today.

For more information, call 0845 873 4066 or visit www.3m.co.uk/apcff.

3M representatives remain contactable by phone or via video conferencing.

Over 100,000 sterilisers produced

W&H, a globally leading dental manufacturer, has hit an exciting milestone, having now produced over 100,000 sterilisers for businesses around the world. A fantastic achievement, this demonstrates the company's continued dedication to quality-proven solutions.

W&H has been designing and fabricating sterilisers for dental professionals since 1999, accruing decades of experience within the profession to really understand the needs of dental practices. All W&H sterilisers are created by a team of experts at W&H's Sterilisation Centre in Brusaporto, Italy, perfectly combining style and elegance with efficiency and practicality.

Today, W&H offers an impressive range of solutions with the Lisa, a fully automated B type steriliser, the Lara and the Lyla S type with innovative upgradeability options. The range of sterilisers available are designed to meet the requirements and preferences of any dental team.

Why not discover the latest generation of solutions and see for yourself how W&H has continued to invest in research and development, allowing us to use our experience of 100,000 sterilisers to produce tailored solutions ideally suited to the needs of individual practices.

The exceptional portfolio from W&H with innovative functionalities offers top quality decontamination solutions for all.

Twist and you're safe

Anaqa disposable syringes, exclusively available from dental dealer Trycare, are user friendly and protect you and your colleagues from needlestick injuries.

The difference between Anaqa disposable syringes and other disposable safety syringes is that they are not restricted to one specific manufacturer's needle; they can be used with any manufacturer's needle and any manufacturer's local anaesthetic. Consequently, Anaqa disposal syringes enable dental practices to use their preferred choice of injection needle and local anaesthetic.

Anaqa disposable syringe is a 2.2 ml single use safety syringe featuring a safety sleeve which slides over the barrel. It has a soft lock for use prior to administering the local anaesthetic and a hard lock once finished to facilitate safe disposal. The silicon gasket in the Anaqa syringe creates a negative pressure which aspirates blood if the needle is inside a blood vessel.

Anaqa disposable syringes are available from stock in five colours: white, red, purple, green and blue. They are priced at £7.44 for a pack of 24, equivalent to just 31p each. They enable practices to have all the benefits of a safety syringe whilst enjoying the benefits of using their favourite brand of needle. All prices exclude VAT.

For more information about the Anaqa range, contact your local Trycare Representative, call 01274 885544 or visit www.trycare.co.uk.
