

# Dental products and services

Please send product news information and images to Kate Quinlan at [k.quinlan@nature.com](mailto:k.quinlan@nature.com). Product news is provided as a service to readers using text and images from the manufacturer, supplier or distributor and does not imply endorsement by the BDI. Normal and prudent research should be exercised before purchase or use of any product mentioned.

## For all the PPE you need

UK company Trycare supply an extensive range of personal protective equipment (PPE) products to meet the individual requirements of every member of the dental practice team. This includes an extensive range of disposable drapes and gowns.

Trycare's disposable sterile surgical gowns and drapes are made of a fluid-repellent three-layer laminate of breathable material to ensure the comfort of the wearer during the operative procedure. They combine comfort and performance, providing practices with the very best available protection and working conditions. Fully compliant with EN13795 and CE Marked 93/42/EEC, they are available in a range of sizes to meet every need.

Trycare offer their drapes, gowns and ancillary items individually, in bulk packs and in a variety of off-the-shelf packs designed to meet the requirements of different clinical procedures.

Should none of the above contain exactly what you want then Trycare can supply customised drape kits designed to meet the individual needs of the practice.

For more information about Trycare's comprehensive PPE range, including drapes and gowns, contact your local Trycare Representative, call 01274 885544 or visit [www.trycare.co.uk](http://www.trycare.co.uk).

## Happy to discuss industry-leading solutions

W&H, an industry-leading manufacturer of innovative handpieces, decontamination, surgical and prophylaxis solutions, will be available on stand L42 at this year's British Dental Conference and Dentistry Show!

W&H's team will be happy to discuss a number of their cutting-edge solutions, including the unique upgradeability functions of their Lara and Lyla sterilisers. Take a closer look at their celebrated Implantmed and surgical range and discover how all their products can help you work faster, smarter and more sustainably.

W&H are looking forward to seeing you at the show!

To find out more visit [www.wh.com/en\\_uk](http://www.wh.com/en_uk), call 01727 874990 or email [office.uk@wh.com](mailto:office.uk@wh.com).

## New cartridge and mixing tip system

Three essential factors impact conventional impressions: the quality of the impression material, the processing time, and the simplicity and efficiency of the application. The new cartridge and mixing tip system available from Dentsply Sirona seeks to improve these application features for brands like Aquasil Ultra+.

The decisive factor is the newly developed design of the mixing tip. It can be easily fixed to the cartridge thanks to a turning wing and small alignment pin. A corresponding connection mechanism reduces the risk of cross-contamination between the base and catalyst components. The new integrated 50 mL cartridge and mixing tip system requires only a one-time bleed before first use, for life of the cartridge. In combination with the reduced-volume cannula, material waste can be reduced by up to 64% and the number of uses per cartridge increased by ten additional applications. This optimisation enables consistent homogeneous mixing and efficient use of the impression material.

The colour-coded cartridges and mixing tips help to connect the cartridges with the appropriate tip. The new mixing tips are compatible with standard application systems already available on the market. With the new mixing tips, the special product properties of Aquasil Ultra+ are even more apparent. The impression material is placed in the tray in an optimum mixing ratio and thus contributes to an accurate impression result even in critical clinical situations.

The new cartridge and mixing tip system achieves ease of use and efficient application of the material. Less material waste means conserving resources and actually saving money.

As a leader of digital and analogue impression taking techniques, Dentsply Sirona has two successful options that just got better: Aquasil Ultra+ for conventional impressions and Primescan for digital impressions.
