

Be less wasteful with your clinical waste

Initial Medical is proud to announce the launch of their new eco-friendly solution – Sustainable Clinical Waste Bags.

They've introduced 30% recycled plastic into their Clinical Waste Bag range, helping them to eliminate 80 tonnes of virgin polythene material from production per year – a weight equivalent to approximately ten African elephants or 33 Initial Medical service vehicles! This way, by switching to these solutions, dental professionals can rest assured that they are reducing their impact on the planet while still ensuring that any clinical waste generated in

practice is properly segregated and contained.

Manufactured in the UK, these solutions are also sustainably produced and transported. Conscious effort has been made to reduce any environmental impact by reusing freshwater responsibly and harnessing renewable energy throughout production and ensuring CO2 emissions are minimised during transport.

Make a greener choice for your practice – contact Initial Medical today.

You won't believe the gleam!

Trycare Ltd, the UK's fastest growing dental supplier, is the UK distributor for Eve surgical polishing tips and strips. Manufactured in Germany from premium grade materials, Eve polishing tips and strips enable clinicians to achieve the most natural lustre and shine on their restorations whatever they are made from.

The special geometry of Diacomp Plus Twist polishers enables clinicians to polish any surface with just one polisher, resulting in a high-shine and significant time saving. Offering extraordinary durability, surface structure preservation and reduced heat generation they can be autoclaved in excess of 25 times.

Diacomp Plus Occluflex is Eve's unique occlusal polisher. It has been designed to achieve high-quality results on otherwise

difficult to access occlusal surfaces. The twisted filaments reaching right down to the deepest fissures. They produce a high shine without the need for polishing pastes.

Both are used in a simple two-step process. First, the pink pre-polisher is used to smooth the restoration after using a gross anatomy trimmer. Then, the grey fine polisher is used to produce the final high shine finish that really makes restorations gleam. Perfect for use with Tokuyama spherical particle composites, which deliver their own exceptional lustre and finish!

Take your career from limited to limitless

How you view your situation or your life is how it will be. If you see barriers, you will struggle; if you see opportunity, you will succeed.

To take your dental career to new heights, you have to be ready and willing to find new ways of working, to seek out the chance to grow and to be committed to your development. There are many ways to push yourself outside your comfort zone, from learning new clinical skills to buying your own business, building confidence in selling to patients or public speaking.

The Re-IGNITE Academy, led by Dr Mahmood Mawjee (pictured), is there to help you take those life-changing first steps. Its programmes will teach you how to strategise your growth, prepare for it and make the very most of it. It will give you the skills and confidence you need to go out into the world and make your dreams happen.

Ultimately, the Re-IGNITE Academy will help you change your mindset and take your career from limited to limitless. Who wouldn't want that?
