Is note taking slowing you down?

Don't let administrative tasks take up your entire day. For a better way, try Kiroku.

We all understand the importance of taking complete and accurate clinical notes, but this repetitive task takes a long time. With Kiroku, the innovative digital note taking platform, you can complete your notes 60% faster than you otherwise would.

With dynamic templates from Kiroku, your notes virtually write themselves, prompting you to include relevant information with the click of a button. You can still retain your personal touch too, with a range of opportunities for customisation – including the ability to create or upload your own template.

Choose Kiroku to create bespoke clinical notes, and take back control of your day.

To find out more about Kiroku, or to start your free trial, visit <https://trykiroku.com/>.

Highly aesthetic veneers

When providing patients with highly aesthetic veneers, using quality materials is of utmost importance. Panavia Veneer LC is available from J&S Davis and is a colour-stable, light-curing resin cement system that maintains the long-term aesthetic appearance of veneers.

It offers excellent stability under ambient light, which leads to a working time of 200 seconds – allowing you to place multiple veneers at a time, without needing to race against the setting time, and helping you to produce consistently excellent results.

Panavia Veneer LC also offers homogenous cement application, smooth veneer positioning and excess removal, and quick polishing. This makes it possible to reduce the time and effort involved in veneer placement. So, when choosing a cement system, consider using the Panavia Veneer LC, available from J&S Davis – a great

solution for a challenging task.

For more information on the industry-leading products available from J&S Davis, visit www.js-davis.co.uk, call 01438 747 344 or email jsdsales@js-davis.co.uk.

For anteriors and posteriors

Tokuyama's Omnichroma colourless composite is indicated for both anterior and posterior restorations.

Tokuyama is the only composite manufacturer to use patented spherical filler particles within their composite materials. Each variant utilising spherical particles of different diameters to maximise their optical and physical properties for the desired indication.

In addition to optimised optical properties resulting in enhanced aesthetic restorations, Tokuyama's spherical filler particles offer other significant advantages compared with the irregular shaped filler particles used by all other manufacturers. They are quicker and easier to pack into nooks and crannies, reducing the risk of voids; easier to sculpt and carve, producing enhanced morphology of the final restoration; and a much smoother surface finish which has a natural high sheen that requires minimal if any polishing.

Tokuyama's development of spherical filler particles has culminated in Omnichroma, the world's only colourless universal composite. It is the only universal composite that can match every tooth colour no matter what the shade.

In addition to all the inherent advantages associated with Tokuyama's patented spherical filler particles, employing Omnichroma within your practice means freedom from time-consuming and subjective shade-matching procedures; money saved on overheads and reduced waste from expired rarely used Vita shades; and no need to replace restorations after tooth bleaching.

For more information about the complete Tokuyama range, including Omnichroma, contact your local Trycare Representative, call 01274 885544 or visit www.trycare.co.uk.
