

Measure implant stability with confidence

The Osstell Beacon is a swift and non-invasive diagnosis instrument, delivered proudly by W&H. This innovative solution helps clinicians objectively determine implant stability, as well as measure the degree of osseointegration without risking the healing period.

The implant stability quotient (ISQ) values are displayed on a colour wheel, providing information on the degree of osseointegration. With the Osstell Connect portal, clinicians can easily extract data, share files and view the results of each implant measurement. This can be done using a computer, tablet or even a smartphone.

With over 1,200 reviewed articles demonstrating the efficacy of the Osstell Beacon, clinicians can rest assured that they'll receive a fantastic performance, every time. To discover more about W&H solutions and systems, get in touch or visit the website today.

Carry out safe and accurate caries removal

When treating caries, it may be difficult to accurately identify infectious carious tissue. In these cases, it can be reassuring to have a clinical aid to help determine the presence and removal of infectious tissue.

Caries Detector from Kuraray, available through J&S Davis, is the ideal clinical tool in these scenarios, providing the clinician with certainty when removing carious dentine. Not only does this aid in the removal of infected tissue, but it also

helps to prevent the removal of healthy, remineralisable dentine.

By using Caries Detector, you are able to maximise the amount of remaining healthy tissue and protect the pulp from accidental injury.

Get in touch with the team at J&S Davis for more information. For more information on the industry-leading products available from J&S Davis, visit www.js-davis.co.uk, call 01438 747 344 or email jsdsales@js-davis.co.uk.

Tailor the patient experience

With a diverse patient list, it takes a lot of time and energy to tailor the patient experience to every individual.

But what if there were a way to streamline the process, freeing up time while also ensuring that every patient receives communications, marketing materials and other important information in the way that suits them best?

Patient Bridge from Carestream Dental is the solution you're looking for.

An add-on for existing R4 practice management software customers, Patient Bridge utilises cloud-based features to automate communications and marketing material while also adding extra benefits such as a virtual waiting room. This way, patients receive individualised attention, you save time and your practice runs more smoothly!

To find out more, contact the team today.
