

the paediatric dentist, an orthodontist, endodontist, prosthodontist and an oral surgeon may form the dental team required in successful management of patients presenting with macrodontia and double teeth.

Ethics declaration

The authors declare that they have no conflicts of interest.

Written consent was obtained from the patient's parent for use of clinical images in Case 4.

Author contributions

The study was conceived and designed by Nabina Bhujel. Sajida Mamdani was involved in the literature search, analysis, addition of cases and drafting of the article. Sajida Mamdani, Divya Pathak, Mike Harrison and Nabina Bhujel contributed to the write-up and approved the final manuscript.

Correction to: Delayed diagnosis of oral lymphoma: a case series

The original article can be found online at <https://doi.org/10.1038/s41415-023-5462-0>

Author's correction note:

Clinical article *Br Dent J* 2023; DOI: 10.1038/s41415-023-5462-0.

When this article was originally published, the caption for Figure 1 incorrectly referenced the lower left second molar/third molar instead of the lower right second molar/third molar. The correct figure caption is included below:

Fig. 1 An OPG radiograph showing diffuse radiolucency around the roots of the lower right second molar with loss of the lamina dura and widening of the periodontal ligament space. The extraction socket is visible following removal of the lower right third molar, initially thought to be the cause of the symptoms.

The authors apologise for any inconvenience caused.
