

Quick, patient-friendly clear aligners

3Dalign clear aligners from Trycare are quicker and more patient-friendly than other systems. Real practice builders, they enable clinicians to offer their patients a simple and cost-effective way to straighten teeth and correct other orthodontic problems.

3Daligners can be used to resolve crowded teeth, space closure between teeth, crossbite, overbite and underbite. Treatment plans include a personalised patient video so that clinicians can demonstrate the stages involved and the final outcome for every patient.

With some treatment plans taking as little as ten weeks and the majority requiring just ten to 20 aligners, 3Daligners are much quicker and more patient compliant than other systems.

3Daligners are supplied in a progressive set of five so that should the treatment plan

need to be modified this can be done quickly and easily and without the clinician having to absorb the cost of wasted aligners.

As the clinician is dealing directly with the technicians, manufacturing the aligners, there is no cumbersome computer interface to negotiate, and an immediate response is available.

For more information about the 3Daligner range, including webinar details, contact your local Trycare Representative, call 01274 885544 or visit www.trycare.co.uk.

Fifty years of dental unit evolution

With over 50 years of experience in dental equipment design and manufacturing, Planmeca is committed to ongoing development and excellent craftsmanship. The new Planmeca Pro50 dental unit is the result of continuous enhancement and close collaboration with customers – it is the peak of evolution.

The new dental unit is a true masterpiece of sophisticated technology, individual adaptability, and dynamic ergonomics. All dental unit users are different and unique, so Planmeca Pro50 has been designed to offer its users a new level of flexibility and the freedom to create the dental unit of their dreams without compromise. A smooth workflow is always guaranteed – regardless of the treatment or field of specialty.

The cuspidor can be positioned freely on either side of the patient, and the flexible delivery arm has a wide, virtually unlimited movement range. The combination of these two allows creating space for the team and for any additional devices needed during treatment. The dental unit's functions are symmetrical to enable full left/right conversion. Planmeca Pro50 allows all dental professionals to work on their terms, whether they work two- or four-handedly.

Planmeca Pro50 has an intuitive 7-inch user interface that can be supported with a 15-inch Planmeca ErgoTouch touchscreen monitor. The ergonomically positioned monitor seamlessly extends the user experience by bringing together all the elements of a daily clinical workflow – from practice management to intraoral scanning and viewing X-ray images. The monitor can also be used for patient education, and its touchscreen function provides new possibilities for updating the patient's dental record during treatment. Both the user interface and the monitor can be used to guide the dental team.

The one-of-a-kind, vertically lifting chair of the dental unit is height-adjustable from 390 to as high as 890 mm. This allows dental professionals of all sizes to work in their preferred position while sitting or standing. www.planmeca.com

Help your patients tackle bad breath

The Breath Co provides a refreshingly different solution that will help your patients tackle bad breath, thanks to their dentist-formulated oral rinses.

The team will be on stand K36 at the British Dental Conference & Dentistry Show Birmingham 2023 (BDCDS) to showcase The Breath Co mouthwash solutions – The Breath Co 12-hour Fresh Breath Oral Rinse in mild and icy mint.

These products are alcohol-free, so no harsh afterburn.

They're also designed to support rather than strip the natural balance of the mouth for 12 hours after use. The patented formula utilises the natural germ fighting power of oxygen to get to the source of bad breath and gum irritation, putting a stop to bad breath.

Bad breath shouldn't ruin your patients' confidence – with The Breath Co solutions, it doesn't have to.

Book your place to see the team at the show. For more information about The Breath Co, visit <http://www.thebreathco.com/>.

Help to transform your workflows

The Straumann Group will be exhibiting at the British Dental Conference & Dentistry Show (BDCDS) this May.

With a wide range of innovative products available, the Straumann Group want to help transform your workflows, saving you time, and helping you provide your patients with high-quality care. Their market-leading range includes orthodontic solutions from ClearCorrect, innovative intraoral scanners, and their world-class range of Straumann, Anthogyr and Neodent implant systems.

Visit the Straumann Group on stands F30 and G30 at the NEC Birmingham on 12 and 13 May to discover the solutions you need to improve the workflows of your dental team.

For more information on the Straumann Group, visit <https://www.straumann.co.uk>.
