

## Major NHS initiative for orthodontists at the BOC

DentalMonitoring is to announce a major NHS initiative for orthodontists with NHS contracts at the British Orthodontic Society's Congress (BOC). From 3-4pm on Thursday, 28 September, the company's CEO Philippe Salah, along with pioneering orthodontists who have been using DentalMonitoring with their NHS patients, will reveal how the company is taking NHS practices to a new level of clinical care and practice optimisation.

Thousands of NHS patients are already benefitting from DentalMonitoring's remote monitoring solutions. Not only that, DentalMonitoring has been showcased as an example of progress in orthodontics in a special anniversary book, *Celebrating 75 years of the NHS*.

After the presentation there will be an interactive session allowing delegates to ask questions to Philippe Salah and gain valuable insights into the way DentalMonitoring will be supporting the NHS, orthodontic practices, and patients. He will be available for one-to-one meetings with delegates along with the DentalMonitoring UKI team.

BOC delegates will also be able to attend daily 'Ask the Expert' sessions with Specialist Orthodontists Dr Murtuza Hasnaini, Dr Dima Mobarak, and Dr Owen Crotty, whilst practice team members will have their own dedicated 'Ask the Expert' sessions with DentalMonitoring Coordinator, Modesta Jakstonyte and orthodontic therapist, Lucy Nuttall. Other on-stand highlights include demonstrations of DentalMonitoring's new scanning process, ScanAssist, and a chance to take part in a 'Beat the AI' competition.

BOC delegates are advised that they need to pre-register for the NHS session on Friday 28 September from 3-4 pm: <https://go.nature.com/3Pz2kNt>.

DentalMonitoring – the first remote monitoring solution to introduce AI to the orthodontic world – can detect more than 130 intraoral observations from a patient's smartphone, including anteroposterior correction, extraction space closure, midline deviation, bracket debonds, wire movement, aligner seat/unseat, TADs, class II correctors, ties, buttons, attachments and more.

## Straight teeth in as little as ten weeks

3Dalign clear aligners from Trycare are quicker and more patient-friendly than other systems. Real practice builders, they enable clinicians to offer their patients a simple and cost-effective way to straighten teeth and correct other orthodontic problems.

3Daligners can be used to resolve crowded teeth, space closure between teeth, crossbite, overbite and underbite. Treatment plans include a personalised patient video so that clinicians can demonstrate the stages involved and the final outcome for every patient.

With some treatment plans taking as little as ten weeks and the majority requiring just ten to 20 aligners, 3Daligners are much quicker and more patient compliant.

3Daligners are supplied in a progressive set of five so that should the treatment plan need to be modified this can be done quickly and easily and without the clinician having to absorb the cost of wasted aligners. A problem associated with other systems where all the aligners are supplied at the start of the treatment.

Because the clinician is dealing directly with the technicians manufacturing the aligners, there is no cumbersome computer interface to negotiate, and an immediate response is available. This is unlike other systems where it can take weeks to receive replacement aligners, during which time the patient's treatment can relapse.

For more information about the 3Daligner range, contact your local Trycare Representative, call 01274 885544 or visit [www.trycare.co.uk](http://www.trycare.co.uk).

## One material, multiple indications

If you need a dual-curing temporary filling material that guarantees an outstanding marginal seal, look no further than DuoTEMP, available from COLTENE.

No mixing! Save time and also optimise patient comfort with its pleasant flavour and tooth-like feeling.

DuoTEMP has great retention, yet is also easy to remove. Formulated from zinc oxide and zinc sulphate, there is additional protection from bacteria. It's eugenol free, which means there is no effect on the curing of composites.

Formulated to be used for multiple indications, DuoTEMP is a high-value product to have in your stock. It can be used as a temporary seal in your endodontic applications, also for inlays and onlays.

To find out more about DuoTEMP, go online at COLTENE – global leader in dental consumables and tools, across a range of treatment segments.

For more on COLTENE, visit [www.coltene.com](http://www.coltene.com) or call 0800 254 5115. COLTENE loyalty scheme <https://rewards.coltene.com>.
