

Insurance against costly and inconvenient emergency appointments

The cost and inconvenience of emergency appointments to replace lost temporary crowns is extremely annoying. Especially if they are at the end of the day or out of hours!

Exclusively available from Trycare, NoMix is a single component, moisture-activated, directly dispensed temporary cement which eliminates this problem.

Suitable for surgery use when initially cementing temporary crowns or bridges it can also be taken home by the patient as insurance against an emergency.

NoMix eliminates the mixing, spatulation and time-consuming messy cleanup of traditional temporary cements, yet offers superior retention. Pre-loaded in single use tubes it enables fast, precise placement. Eugenol-free NoMix is compatible with all resin materials and bonding agents.

Moisture activated, there is no need to dry the teeth, saving time and reducing post-operative sensitivity due to dehydration. NoMix contains Potassium Sulphate, which has an additional desensitising effect on the tooth, zinc oxide, which has an antibacterial effect and helps prevent 'black fungus' and corresponding bad breath, and calcium sulphate which expands slightly to ensure minimal leakage. Working time five minutes, final set time 12 minutes.

NoMix is just one of the Centrix innovations now available from dental dealer Trycare. This expands further the comprehensive range of products available from Trycare, which includes everything you need from all the major manufacturers. Yet another reason to contact Trycare and 'Discover the magic' for yourself!

For further information about the complete Centrix range contact your local Trycare representative, call 01274 885544 or visit www.trycare.co.uk.

AI-powered positioning

Designed to deliver more accurate scans on the first try, the CS 9600 CBCT system, from Carestream Dental, features AI-powered positioning which records each patient's parameters, making follow-up imaging repeatable with a single touch.

Featuring never before achieved 2D and 3D imaging quality, the unit is scalable and designed to grow with your practice.

It offers a multi-function system blending 2D panoramic and cephalometric imaging, CBCT imaging, 3D facial scanning and 3D model scanning. Visit the website today to learn more!

An international ZAGA centre on home ground

The zygoma anatomy-guided approach (ZAGA) is an advanced concept designed to minimise the risks of zygomatic implants and optimise outcomes for patients. There is an array of ZAGA Centres around the world, including one on home soil located in Manchester – the Centre for Oral-Maxillofacial and Dental Implant Reconstruction.

Run by Specialist Oral Surgeon, Professor Cemal Ucer, the centre provides a variety of advanced ZAGA-led treatments that offer patients with complex needs an option for successful restoration.

The highly talented clinical team are well-versed in the latest research across the field and employ only evidence-based techniques in practice to ensure optimal results.

To find out more about the treatments available by referral, contact the team today.

For referrals or training opportunities in maxillary sinus grafting and/or ZAGA Zygomatic Implant techniques, contact Professor Ucer at cemal.ucer@icedental.institute or Mel Hay at mel@mdic.co. Call 01612 371842 or visit www.ucer-clinic.dental.
